## Recomended pass through the study plan

## Name of the pass: Bachelor specialization Computer Engineering, in Czech, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor specialization Computer Engineering, in Czech, 2021

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatika

Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses: P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

## List of courses of this pass:

Code	Name of the course	Completion	Credits
BI-3DT.1	3D Printing	KZ	4
BI-A2L	English language, preparation for the B2 level exam	Z	2
The content of the course	corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achiever	ment - students are due	to: -Take ar
active part in the langua	ge instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in b	ooth the midterm and the	final term
tests with the success rat	e set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified b	y individual teachers du	ring the firs
	class of the term.		
BI-AAG.21	Automata and Grammars	Z,ZK	5
Students are introduced t	b basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of f	finite automata, regular e	xpressions
and regular grammars, co	ntext-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They kno	w the hierarchy of forma	I language
and they und	erstand the relationships between formal languages and automata. They are introduced to the Turing machine and comp	lexity classes P and NP.

pipelined instruction processing and on the memory hierarchy. Students will understand the basic concepts of RISC and CISC architectures and the principles of instruction processing

not only in scalar processors, but also in superscalar processors that can execute multiple instructions in one cycle, while ensuring the correctness of the sequential model of the processor. The course further elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory coherence and consistency in such

program. The course further elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory of	pherence and consiste	ency in such
BI-ARD Interactive applications on Arduino	KZ	4
The subject is designed for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple applications of the subject is designed for students of first grade of bachelor study as introduction to embedded systems.	1	
kits and control varied peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embedded		°
not only on display of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and thereform		
Software Engineering students.		
BI-AVI.21 Algorithms visually	Z,ZK	4
The course complements other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the compute	r science that extend	substantially
knowledge presented in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.or	g <http: td="" www.algovis<=""><td>sion.org&gt;)</td></http:>	sion.org>)
that make understanding the principles of algorithms easy.		
BI-BAP.21 Bachelor Thesis	Z	14
BI-BEK.21 Secure Code	Z,ZK	5
The students will learn how to assess security risks and how to take them into account in the design phase of their own code and solutions. After gettin	-	-
theory, students gain practical experience with running programs with reduced privileges and methods of specifying these privileges, since not ex		
administrator privileges. Dangers inherent in buffer overflows will be practically demonstrated. Students will be introduced to the principles of secur security and database systems, web, remote procedure calls, and sockets in general. The module concludes with Denial of Service attacks an	•	· ·
	-	4
BI-BLE   Blender The course extends knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for the	Z,ZK	
animation. It offers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming g		· /
BI-BPR.21 Bachelor project	7	1
1. At the beginning of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange t	he partial tasks that h	
perform during the semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR		
external supervisor enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.	cvut.cz/student/studijn	ni/formulare).
The completed and signed form will be handed over by the student to the head of the Department of Defense, who will record the credit in KOS. 3		
student has reserved is formulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-t	uning the assignment	so that the
assignment can be supplemented and approved at the end of the semester.		
BI-CCN Compiler Construction	Z,ZK	5
This is an introductory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic princip		
understand the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarch	-	s. 4
BI-CS1   Programming in C# The goal of the course is to introduce .NET Framework as a multi-language development platform. Then, programming language C#, its fundamenta		
operators, arrays, loops, definitions and calls of functions will be discussed. Attention is focused on the object oriented programming in C# - class		
constructors, methods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debugg		<b>U</b>
well as work with files are emphasized.		-
BI-CS2 C# language and data access	KZ	4
The C# language and data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Mic	crosoft platform. The s	tudents will
get to know objects used to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current to	•	
of features for querying and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQ		
and LINQ to SQL). Another objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational da		-
(ORM). This part of the course introduces Code First, Database First, Model First approaches. The students will also get to know the Conceptual Mo (XML description).	del, Stolage Model a	nu wapping
BI-CS3 Language C# - design of web applications	KZ	4
The students will be introduced to current technologies in web application development on the .NET platform. They will acquire a comprehensive overvious of the students will be introduced to current technologies in web application development on the students.	1	
on thisplatform. They will learn to create WebAPI and to use it by client programs.		
BI-DBS.21 Database Systems	Z,ZK	5
Students are introduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They l		databases
(including integrity constraints) using a conceptual model and implement them in a relational database engine. They get a hands-on experience with	the SQL language, as	well as with
its theoretical foundation - the relational database model. They learn the principles of normalizing a relational database schema. They understand the fu		
processing, controlling parallel user access to a single data source, as well as recovering a database engine from a failure. They are briefly introduc		
in relational databases with respect to speed of access to large quantities of data. This introductory-level course does not cover: Administration of d	atabase systems, deb	bugging and
Optimizing database applications, distributed database systems, data stores.           BI-DML.21         Discrete Mathematics and Logic	Z,ZK	5
Students will get acquainted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts		-
Special attention is paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The co		· ·
combinatorics and number theory, with emphasis on modular arithmetics.	, <b>,</b>	
BI-EJA Enterprise Java	Z,ZK	4
The course is on advanced technologies in the Java programming language. The focus is on technologies for development of enterprise information		onnected to
a database and are accessed through the web interface.		
BI-EJK Enterprise Java and Kotlin	Z,ZK	4
The course is on advanced technologies in the Java and Kotlin programming languages. The focus is on technologies for developing enterprise infor	mation systems with r	nicroservice
architecture, that can be deployed to the cloud.		
BI-EP1.24 Effective programming 1	KZ	4
The course is taught in Czech.		
BI-EP2 Efficient Programming 2	KZ	4
Continuation of Efficient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various ways of solving in with the sim to choose the best one and avoid implementation errors.	aividual problems are	aiscussed,
with the aim to choose the best one and avoid implementation errors.           BI-FMU         Financial and Management Accounting	Z,ZK	5
BI-FMU Financial and Management Accounting The aim of the course is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in the		
operations in accounts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal modific	alion of bookkeeping.	

of economic operations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of management accounting are base of Business Intelligence moduls in Business information systems

	Business Inteligence moduls in Business information systems.	Ū	
BI-GIT	Version control system GIT	KZ	2
	troduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and pract		
	mplementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git as		
BI-GIT.21	SW Development Technologies ed at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to	Cit the information	3 n manager
	from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use		manager
BI-HAM	HW accelerated network traffic monitoring	KZ	4
This course intro	duces students to modern and widely used technologies and principles in the area of network infrastructure and traffic monitoring. The	e monitoring and a	nalysis of
	mandatory skills to network operators (planning and development of resources and infrastructure) and security analysts alike (as a s		
for analysis). The g	goals of the course are to acquaint students with the modern trends and cornerstone principles in the area of monitoring network traff level and to develop their practical abilities in this field.	ic on a hardware a	nd software
BI-HAS	Human Aspects in Cryptography and Security	Z,ZK	5
	students interested not only in technical scope of computer science, but also in making products usable - for users and for developer		-
	use their gained knowledge to design, plan and analyse their own projects in the context of human-centered security.		
BI-HMI	History of Mathematics and Informatics	Z,ZK	3
	This course is presented in Czech.		
BI-IOS	Fundamentals of iOS Application Development for iPhone and iPad	KZ	4
BI-JPO.21	This course is presented in Czech. Computer Units	Z,ZK	5
	their basic knowledge of digital computer units acquired in the obligatory course of the program (BIE-SAP), get acquainted in detail v		
	nputer units and processors and their interactions with the environment, including accelerating arithmetic-logic units and using approp		
of multiplication. Th	ne organization of main memory and other internal memories (addressable, LIFO, FIFO and CAM) will be discussed in detail, includin	g codes for error de	etection and
	lel and serial data transmissions. They will also get acquainted with the methodology of controller design, with the principles of comm		
the environment ar	nd the architecture of the bus system. The problems will be practically evaluated in the labs and with the help of the educational micropro and programmable hardware design kits (FPGA).	ogrammed process	or simulator
BI-KAB.21	Cryptography and Security	Z,ZK	5
	derstand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to		-
certificates in syst	ems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in app	lications. Within lab	s, students
	actical skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic proce		
BI-KOT	Programing in Kotlin	Z,ZK	4
	n, statically-styled object-functional language that exploits the extensive Java language ecosystem while delivering a number of advar Illy Java compliant and allows for mixed projects that preserve existing parts written in Java, and continue with the development of a		
The language is in	with minimum of boiler-plate code. Last but not least, Kotlin is suitable for designing of DSLs (Domain-Specific Languages		cuonal way
BI-KSA	Cultural and Social Anthropology	ZK	2
The one-semester	course aims to acquaint students with the basics of social and cultural anthropology as a scientific discipline dealing with the diversit	y of the world - exa	mples from
anthropological re	search from our "exotic" cultures (topics: kinship, religion, social exclusion, migration, globalization, , material culture, language, healt	h, history, death, et	c) will be
	shown. The course is presented in Czech.	7 71	
BI-LA1.21	Linear Algebra 1 students to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the field	Z,ZK	5 v pumbors
	fields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian elimin		
	vith linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eigen		
	matrix. We will also demonstrate some applications of these concepts in computer science.		
BI-LA2.21	Linear Algebra 2	Z,ZK	5
	p edm tu rozší í znalosti z p edm tu BI-LA1, kde se pracovalo pouze s vektory ve form n-tic ísel. Zde si zavedeme vektorový pros ké s pojmem skalární sou in a lineární zobrazení, což nám dovolí ukázat souvislost s lineární algebrou, geometrií a po íta ovou graf		
	eární algebra, kde si ukážeme potíže s ešením soustav lineárních rovnic na po íta i a možnosti, jak se s tímto problémem vypo áda		
	Ukážeme si také aplikace lineární algebry v r zných oborech.		
BI-MA1.21	Mathematical Analysis 1	Z,ZK	5
-	se by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numbers.	-	-
	of a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of functions of the second s	ons. This theoretica

Interport of the second	tudents of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register for BIE-TWA.1. They should register for the of study.  Programming in Java This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753). Introduction to mathematics This course is presented in Czech. However, there is an English variant in the programming styles (B1801 / 4753).  Introduction to mathematics This course is presented in Czech. Programming in Mathematica rking with modern technical and scientific software. Students will learn how to use different programming styles (functional programm etc.), how to create dynamic interactive applications and visualisations, data processing and presentations.  Practical Digital Design erview of the contemporary digital design flow and learn practical use of the design techniques. They understand the on technologies FPGA and ASIC. Students demonstrate practical use of the design techniques in the course project using modern in tools.  Programming in Shell 2 neral overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In additi into shell and some other particular scripting languages and will get practical experience with shell script programming.  Computer Networks es students to the principles of computer network devices in the lab within the environment of the operating systems Linux a Probability and Statistics the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variables.  Quantum algorithms and programming.  Quality Assurance Quality Assurance use students hands-on experience with quantum computing. During tutorials students work in open-source software develop might be an advantage. No previous knowledge of physics is assumed. BI-SKJ.21	Scripting Languages	Z,ZK	4
	eneral overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In additi		
	into shell and some other particular scripting languages and will get practical experience with shell script programming.	on, andy gain a dot	opor moight
BI-SOJ	Machine Oriented Languages	Z,ZK	4
	urse will gain an ability to create their own programs in the assembly language of the most common PC platform focusing on optimal us		-
	ration of software with hardware. Next, there will be discussed x86 specifics of the majority of OSes from the application point of view li		
	This knowledge will be used during reverse engineering, optimization, and evaluation of code security.	0	0 0
BI-SQL.1	Language SQL, advanced	KZ	4
	h knowledge obtained in BI-DBS. Students become familiar with advanced relational and non-relational features of SQL language. In pa		gram unites,
triggers, recursive	queries, OLAP support, object-relational constructions. Part of the course is dedicated to practical database optimization from the point	of view of specialize	ed database
structures like ind	lexes, clusters, index-organized tables, and materialized views. as well as from the point of view query optimization. Execution plan ar	nd possibilities of it	s. changes
will be discusse	ed. Lectures will usually discuss SQL standard, but many features will be demonstrated on Oracle DBMS. Seminars are based on Ora	acle DBMS and pa	rtially on
	PostgreSQL.		
BI-SRC.21	Real-time systems	Z,ZK	5
	he basic knowledge in the real-time (RT) system theory and in the design methods for RT systems including the dependability issues		-
lectures will be ex	perimentally verified in computer labs. The course is mainly focused on embedded RT systems, therefore the design kits in the lab ar	e the same as in th	ne BIE-VES
	course.	_	
BI-ST1	Network Technology 1	Z	3
The subject is or	riented to providing the students basic information and practical skills from the area of digital and IP networks. The subject is acredite	d under the Cisco	Netacad -
	CCNA1 - R&S Introduction to Networks.	_	
BI-ST2	Network Technology 2	Z	3
	This course is presented in Czech.	-	-
BI-ST3	Network Technology 3		3
	er enhance their knowledge acquired from previous BI-ST1 and BI-ST2 courses. Principles of routing and switching presented during E		
get further exten	ded in the course. Students will be able to start fine-tune protocols' settings to gain certain advantages like increased efficiency, pred simple topology, security, etc.	iciability, extension	beyond a
BI-ST4	Network Technology 4	7	3
	er enhance their knowledge already acquired from previous BI-ST1, BI-ST2, and BI-ST3 courses. Principles of routing and switching	. –	-
	ot further extended in BI-ST3. Students were able to start fine-tune protocols' settings to gain certain advantages like increased effici	-	
	topology, security, etc. This module teaches students to configure and fine-tune Wide Area Networks and to experience a completely		
	le Access) which radically differs from well-known Ethernet (broadcast) type of networks. Students will also manage router and switch		·
recoveries, and er	mergency procedures. Also the security aspect is treated; students will learn possible intra- and inter-network attacks and the mitigati	on ways while mair	ntaining the
	network running.		
BI-STO	Storage and Filesystems	Z,ZK	4
The student will lea	arn principles and current solutions of storage systems architecture. The module explains principles of data store, protection, and arch	iving, as so as stor	age scaling,
	load balancing and high availability.		
BI-TDA	Test driven architecture	KZ	4
The course is for	cused on practical examples of how to develop, test, and deploy software with tools like GitLab, Docker, Kubernetes, and more that a	re well known in the	e DevOps
world. This co	purse has a strong connection on courses like BI(E)-SI1 and BI(E)-SI2. The main goal of this course is to learn by examples that occu	r in the semester p	project.
BI-TDP.21	Documentation and Presentation	KZ	3
	sed on the basics of creating electronic documentation with emphasis on the creation of technical reports of a larger scope, typically fi	-	
	of a technical report in the LaTeX system, process an electronic presentation using the LaTeX Beamer system, and practically prese		
the teacher. The	course is intended primarily for those students who have chosen the topic of their bachelor's thesis or will choose it within the first 14	days of teaching.	Within the
	exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed.		
BI-TEX	TeX and Typography	Z,ZK	4
I his course is pres	sented in Czech. This course gives basics of programming in TeX (plain TeX, ConTeXt, LaTeX, OpTeX, LuaTeX). Te second part of the	course focuses on	typographic
	rules.	7	4
