## Recomended pass through the study plan

## Name of the pass: Bachelor specialization Software Engineering, in Czech, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor specialization Software Engineering, in Czech, 2021

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatika

Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses: P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

## List of courses of this pass:

Code	Name of the course	Completion	Credits
BI-3DT.1	3D Printing	KZ	4
	English language, preparation for the B2 level exam rse corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement juage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both		
tests with the success r	rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by inc class of the term.	dividual teachers du	iring the firs
BI-AAG.21	Automata and Grammars	Z,ZK	5
and regular grammars,	d to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of finite context-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They know th nderstand the relationships between formal languages and automata. They are introduced to the Turing machine and complexity	e hierarchy of forma	al languages
BI-ACM	Programming Practices 1 This course is presented in Czech.	KZ	5
BI-ACM2	Programming Practices 2 This course is presented in Czech.	KZ	5
BI-ACM3	Programming Practices 3 This course is presented in Czech.	KZ	5
BI-ACM4	Programming Practices 4 This course is presented in Czech.	KZ	5
BI-ADW.1	Windows Administration This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	Z,ZK	4
BI-AG1.21	Algorithms and Graphs 1	Z,ZK	5
develops the knowledge	he basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computing cu ge from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evaluating the ms. The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular, the asy	e time and space co	
BI-ALO	Algebra and Logic The course extends and deepens the study of topics touched upon in the basic course in logic.	Z,ZK	4
BI-AND.21	Programming for the Android Operating System This course is presented in Czech.	KZ	4
BI-ANG	English Language, Internal Certificate Course information and teaching materials can be found at https://moodle-vyuka.cvut.cz/course/search.php?search=BI-AI	ZK NG	2
BI-ANG1	English Language Examination without Preparatory Courses	Z,ZK	2
	English language, contact preparation for the B2 level exam rse corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement juage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both	Z - students are due	
	rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by ind class of the term.		

BI-APJ	Aplication Programming in Java	Z,ZK	4
BI-ARD	This course is presented in Czech. Advanced technologies in Java. Interactive applications on Arduino	KZ	4
	gned for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple applicat		
kits and control va	ried peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embedded s	ystems, i.e. to see	the results
not only on displa	ay of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and therefore Software Engineering students.	is suitable even for	r Web and
BI-AVI.21	Algorithms visually	Z,ZK	4
The course comple	ments other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the computer sc		substantially
knowledge presente	ed in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.org&l	t;http://www.algovis	sion.org>)
	that make understanding the principles of algorithms easy.		
BI-BAP.21	Bachelor Thesis	Z	14
BI-BLE	Blender ds knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for those in	Z,ZK	4
	offers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming graph	-	-
BI-BPR.21	Bachelor project	7	1
	g of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the	partial tasks that h	e / she will
-	semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR at the		
	enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvul		,
-	ind signed form will be handed over by the student to the head of the Department of Defense, who will record the credit in KOS. 3. If t	-	
student has reser	ved is formulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tunir	ig the assignment	so that the
<b>BLCCN</b>	assignment can be supplemented and approved at the end of the semester.	7 71/	F
BI-CCN	Compiler Construction uctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles	Z,ZK	5 udents to
	and the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching		
BI-CS1	Programming in C#	KZ	4
	urse is to introduce .NET Framework as a multi-language development platform. Then, programming language C#, its fundamental co		-
operators, arrays	s, loops, definitions and calls of functions will be discussed. Attention is focused on the object oriented programming in C# - class def	inition and class in	stancing,
constructors, meth	ods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debugging	and exception pro	cessing, as
	well as work with files are emphasized.		
BI-CS2	C# language and data access	KZ	4
	and data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Micros		
	is used to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current techr rying and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQL (L	-	
	). Another objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational data u	-	
	f the course introduces Code First, Database First, Model First approaches. The students will also get to know the Conceptual Model		
	(XML description).		
BI-CS3	Language C# - design of web applications	KZ	4
The students will be	e introduced to current technologies in web application development on the .NET platform. They will acquire a comprehensive overview of	of the development	possibilities
	on thisplatform. They will learn to create WebAPI and to use it by client programs.	7 71/	F
BI-DBS.21 Students are intr	Database Systems oduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They lear	Z,ZK	5
	constraints) using a conceptual model and implement them in a relational database engine. They get a hands-on experience with the		
	lation - the relational database model. They learn the principles of normalizing a relational database schema. They understand the funda		
processing, contro	lling parallel user access to a single data source, as well as recovering a database engine from a failure. They are briefly introduced t	o special ways of	storing data
in relational databa	ases with respect to speed of access to large quantities of data. This introductory-level course does not cover: Administration of data	base systems, deb	ugging and
	optimizing database applications, distributed database systems, data stores.	7 71/	-
BI-DML.21	Discrete Mathematics and Logic equainted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts fro	Z,ZK	5
•	paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The cours		•
	combinatorics and number theory, with emphasis on modular arithmetics.	e alee laye demit	
BI-EJA	Enterprise Java	Z,ZK	4
	dvanced technologies in the Java programming language. The focus is on technologies for development of enterprise information systemation systematical structures and the systematical sys	,	onnected to
	a database and are accessed through the web interface.		
BI-EJK	Enterprise Java and Kotlin	Z,ZK	4
The course is on a	dvanced technologies in the Java and Kotlin programming languages. The focus is on technologies for developing enterprise informat	ion systems with n	nicroservice
	architecture, that can be deployed to the cloud.		
BI-EP1.24	Effective programming 1	KZ	4
	The course is taught in Czech.	<b>V7</b>	4
BI-EP2 Continuation of Ef	Efficient Programming 2 ficient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various ways of solving individ	KZ	4 discussed
	with the aim to choose the best one and avoid implementation errors.		aisousseu,
BI-EPP.21	Economic Business Processes	Z,ZK	5
	rse is to present typical processes related to the usual life cycle of a company. The course focuses mainly on the basic economic and		
	ronment of the Czech Republic and the basics of management. In the course, students are acquainted with the typical phases of the		
establishment of th	he company, through the management of property and capital structure, financing of the company, determining the cost function of the	e company and lab	oor costs, to
<b></b>	evaluating the financial health of the company and its eventual rehabilitation or termination.		_
BI-FBI.21	Financial Business Intelligence	Z,ZK	5
	rse is to acquaint students primarily with financial accounting as a tool for recording business operations and documents for business s for comparison with other companies and management decision process at the tactical and strategic level. The second view is man	-	-
	s for comparison with other companies and management decision process at the tactical and strategic level. The second view is man ement and prediction of business development. Management accounting allows monitoring of the financial status and performance of b	-	-
-	cinemant provide a multidimensional view of business data enables to control effectively factors affecting the return on invested cancilat and		

assess options related to future business decisions. The principles of management accounting, described in this course, are the basis of Business Intelligence modules in business information systems, decision support systems, and other knowledge-oriented systems.

	information systems, decision support systems, and other knowledge-oriented systems.			
BI-FMU	Financial and Management Accounting	Z,ZK	5	
	rse is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in the pa	-		
•	operations in accounts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal modification of bookkeeping, description of economic operations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of management accounting are base of			
	Business Inteligence moduls in Business information systems.	non doodning u	0 5400 01	
BI-GIT	Version control system GIT	KZ	2	
Students will be in	troduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and pract	ically. In this particu	lar system	
	mplementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git			
BI-GIT.21	SW Development Technologies	Z	3	
This course is aime	ed at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to		n manager	
BI-HAM	from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use HW accelerated network traffic monitoring	KZ	4	
	duces students to modern and widely used technologies and principles in the area of network infrastructure and traffic monitoring. The			
	mandatory skills to network operators (planning and development of resources and infrastructure) and security analysts alike (as a s	-	-	
for analysis). The g	poals of the course are to acquaint students with the modern trends and cornerstone principles in the area of monitoring network traff	ic on a hardware ar	nd software	
	level and to develop their practical abilities in this field.			
BI-HAS	Human Aspects in Cryptography and Security	Z,ZK	5	
This course is for	students interested not only in technical scope of computer science, but also in making products usable - for users and for developer use their gained knowledge to design, plan and analyse their own projects in the context of human-centered security.	s. Students of this c	course can	
BI-HMI	History of Mathematics and Informatics	Z,ZK	3	
DI-LIMI	This course is presented in Czech.	Ζ,ΖΝ	3	
BI-IDO.21	Introduction to DevOps	Z,ZK	5	
	vith the topic of DevOps and prepares future developers and administrators for a modern culture of development and operation of sys		-	
covers the tools to	support software development, testing and compilation. It also focuses on tools for automating infrastructure management and build	ing and deploying s	software to	
the Cloud. It is an	introduction to technologies that will then be discussed in more detail in related follow-up courses. The student will also get acquaint used in practice.	ed with modern tec	hnologies	
BI-IOS	Fundamentals of iOS Application Development for iPhone and iPad This course is presented in Czech.	KZ	4	
BI-KAB.21	Cryptography and Security	Z,ZK	5	
	Jerstand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to	· ·	-	
certificates in syste	ems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in app	ications. Within labs	s, students	
	actical skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic proce	dures of cryptanaly		
BI-KOM.21	Conceptual Modelling	Z,ZK	5	
	ised on developing abstract thinking and precise formulation skills using conceptual models. Students learn skills of discerning key te cify correct relations in complex systems of social reality, mostly enterprises and institutions. Students learn basics of ontological struc		-	
	r learn how to express business rules and constraints using the OCL language and foundations of OWL/RDF semantic data represent	-		
-	ns of enterprise engineering, being a discipline for conceptual modelling of enterprises and institutes and their processes. The DEMO r			
wi	Il be taught. The course is designed with the respect to continuation in software implementations. Recommended optional follow-up c	ourse: BI-ZPI.		
BI-KOT	Programing in Kotlin	Z,ZK	4	
	n, statically-styled object-functional language that exploits the extensive Java language ecosystem while delivering a number of advar			
The language is it	Illy Java compliant and allows for mixed projects that preserve existing parts written in Java, and continue with the development of a with minimum of boiler-plate code. Last but not least, Kotlin is suitable for designing of DSLs (Domain-Specific Languages)	-	cuonal way	
BI-KSA	Cultural and Social Anthropology	ZK	2	
	course aims to acquaint students with the basics of social and cultural anthropology as a scientific discipline dealing with the diversit	I I		
anthropological res	search from our "exotic" cultures (topics: kinship, religion, social exclusion, migration, globalization, , material culture, language, healt	h, history, death, etc	c) will be	
	shown. The course is presented in Czech.			
BI-LA1.21	Linear Algebra 1	Z,ZK	5	
	students to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the field	-		
	fields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian elimin ith linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eigen		·	
	matrix. We will also demonstrate some applications of these concepts in computer science.			
BI-MA1.21	Mathematical Analysis 1	Z,ZK	5	
We begin the cours	se by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numbers.	Then we study real	sequences	
	of a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of functions			
	ot-finding problems (iterative method of bisection and Newton's method), construction of cubic interpolation (spline), and formulation and ssue of finding extrema of functions). The course is closed with the Landau's asymptotic notation and methods of mathematical descript		· .	
BI-MA2.21	Mathematical Analysis 2	Z,ZK	aigonithins. 6	
	tes the theme of analysis of real functions of a real variable initiated in BI-MA1 by introducing the Riemann integral. Students will lear			
	n method. The next part of the course is devoted to number series, and Taylor polynomials and series. We apply Taylor's theorem to t	-		
-	escribed accuracy. Then we study the linear recurrence equations with constant coefficients, the complexity of recursive algorithms, ar			
theorem. Finally, we introduce the student to the theory of multivariate functions. After establishing basic concepts of partial derivative, gradient, and Hessian matrix, we study the				
-	f localization of local extrema of multivariate functions as well as the numerical descent method. We conclude the course with the integ			
BI-MIT	Mikrotik technologies	KZ	3	
	on of the subject stands in the introduction of the RouterUS operating system and some network Mikrotik technologies which are con	nmonly used by the		
middle internet ser	on of the subject stands in the introduction of the RouterOS operating system and some network Mikrotik technologies which are cor vice providers (ISPs). The students learn how to use and create the architectures of the network solutions which are based on the m			
		etallic, optical or wi	reless links	
and how to adminis	vice providers (ISPs). The students learn how to use and create the architectures of the network solutions which are based on the m trate and practically deploy them. The successful completion of this subject requires the previous knowledge of elementary computer ne and technologies of the data-link, network and transport layer of the OSI model.	etallic, optical or win etworks concepts lik	reless links æprotocols	
	vice providers (ISPs). The students learn how to use and create the architectures of the network solutions which are based on the m trate and practically deploy them. The successful completion of this subject requires the previous knowledge of elementary computer ne	etallic, optical or wi	reless links	

BI-MPP.21	Methods of interfacing peripheral devices	Z,ZK	5	
The course is focu	sed on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Universa	I serial bus (USB).	The course	
includes both PC	includes both PC side and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of USB devices, Linux and Windows			
	drivers, simple application development, and APIs of selected devices.			
BI-MVT.21	Modern Visualisation Technologies	Z,ZK	5	
-	purse is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual and augm plays (e.g., SAGE and video mapping) and their applications in practice. Several lectures deal with the content creation for the mentione			
riigi resolution dis	and procedural visualization, scientific data visualization, and 3D model scanning.	ia technologies, na	mely nacial	
BI-00P.21	Object-Oriented Programming	Z,ZK	5	
	programming has been used in the last 50 years to solve computational problems by using graphs of objects that collaborate together	I ' I	-	
	et acquainted with the main principles of object-oriented programming and design, used in modern programming languages. The emph		-	
	for developing software, which includes testing, error handing, refactoring, and application of design pattern.			
BI-OPT	Introduction to Optical Networks	Z,ZK	4	
	overview of optical networking technology with the emphasis on practical utilization in Internet and in network infrastructures, on poss		deployment	
of optical networ	k technology and on their solutions. The course will include the history of optical communications, an overview of passive components	s (optical fibres, mu	Itiplexors,	
dispersion comper	nsators, and others), and an overview of active components (optical switches and amplifiers, high-speed coherent transmission system	ns). The course wil	l also cover	
	te topics presented at premium research conferences, such as ECOC or OFC. Attention will also be paid to new applications, such as			
ultrastable freque	ency transfer, or sensor networks. The labs will focus on real work with optical components and on measurement of their parameters.	Students will solve	real tasks	
	from practice.	<b>1/7</b>	~	
BI-ORL	Operations Research and Linear Programming to introduce students to the issues of operational research and primarily to the practical application of linear programming as a fundar	KZ K	5	
	onal research primarily focuses on the use of engineering methods (with a mathematical background) to solve practical problems (suc	•	•	
BI-OSY.21	Operating Systems	Z.ZK	,. 5	
	s a follow-up of the Unix-like operating systems course students deepen their knowledge in areas of OS kernels, process and thread imp	, i i	-	
	ead scheduling, shared resource allocation and deadlocks, management of virtual memory and data storages, file systems, OS moni			
<b></b>	and implement simple multithreaded applications. General principles are illustrated on operating systems Solaris, Linux, or MS W	<b>.</b> .	J	
BI-PA1.21	Programming and Algorithmics 1	Z,ZK	7	
	ability to formulate algorithms for solving basic problems and write them in the C language. They understand data types (simple, structure)		xpressions,	
statements, funct	ions, concept of recursion. They learn to analyse simple cases of algorithm complexity. They know fundamental algorithms for searchi	ng, sorting, and ma	anipulating	
	with linked lists and trees.			
BI-PA2.21	Programming and Algorithmics 2	Z,ZK	7	
Students know the	instruments of object-oriented programming and are able to use them for specifying and implementing abstract data types (stack, que	ue, enlargeable ar	ray, list, set,	
table). They lear	rn these skills using the C++ programming language and are introduced to all C++ features needed in object-oriented programming (e	.g., template progr	amming,	
	copying/moving of objects, operator overloading, inheritance, polymorphism).			
BI-PAI.21	Law and Informatics	ZK	5	
	burse is to introduce students into the basic legal instruments that they will encounter in their practice. Students will gain knowledge of	-		
	vill be alerted to the pitfalls that await them in business from the point of view of law. They will understand the process of concluding construction of the institutes of intellectual property law, and will be able to			
	licenses. Emphasis will also be put on the legal protection of data on the Internet, the registration of Internet domains and protection a			
-	rted to such behaviour in the field of IT that can be classified as criminal under the Czech law. The course will also include analyses of	-		
BI-PHP.1	Programing in PHP	KZ I	4	
	aught in Czech Main goal of the course is an introduction to PHP - language and technology. Students will learn also best practices a			
development in	PHP. The course is recommended for students of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register f	or BIE-TWA.1. The	y should	
	register for this course in their 3rd semester of study.			
BI-PJS.1	JavaScript Programming	KZ	4	
Main goal of the	course is an introduction to Javascript programming. Students will learn also best practices and will use tool that eases development	in Javascript. The	course is	
recommended for	students of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register for BIE-TWA.1. They should register for the	his course in their 4	th semester	
	of study.			
BI-PJV	Programming in Java	Z,ZK	4	
	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).			
BI-PKM	Introduction to mathematics	Z	4	
51 51 44	This course is presented in Czech.			
BI-PMA	Programming in Mathematica	Z,ZK	4	
Students will be w	orking with modern technical and scientific software. Students will learn how to use different programming styles (functional programm etc.), how to create dynamic interactive applications and visualisations, data processing and presentations.	ling, rule-based pro	ogramming,	
		771	-	
BI-PPA.21	Programming Paradigms with basic paradigms of high-level programming languages, including their basic execution models, benefits, and disadvantages of par	Z,ZK	5 Eurotional	
	digm and its basic principles are explained in details. Logic programming is introduced as another way of declarative programming. The			
	is and on Lisp (Racket) and Prolog programming languages. Moreover, usage of these principles is demonstrated on modern mainstr			
	such as C++ and Java.	1 3 4 3	3	
BI-PS2	Programming in shell 2	Z,ZK	4	
	eneral overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In additi			
	into shell and some other particular scripting languages and will get practical experience with shell script programming.			
BI-PSI.21	Computer Networks	Z,ZK	5	
	ices students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in local r		Internet as	
well. The lecture	es will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced network	vork technologies.	Students	
	actically verify configurations and management of network devices in the lab within the environment of the operating systems Linux a			
BI-PST.21	Probability and Statistics	Z,ZK	5	
	the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variables. T	-		
	om variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical induction	-		
estimations of un	known distributional parameters from random sample characteristics. They will also be introduced to the methods for testing statistical the statistical dependence of two or more random variables.	hypotheses and d	etermining	

Course aims at giv	Quantum algorithms and programming	KZ	5
	ing students hands-on experience with quantum computers and their programming. We focus on fundaments of quantum mechanics, o	n which quantum t	echnologies
	gorithms showing advantages and limitations of quantum computing. During tutorials students work in open-source software developr		
on Python langua	age. Knowledge of linear algebra at the level of BI-LA1 and BI-LA2 (or BI-LIN) is necessary. Previous completion of BI-MA2 or BI-VMN	1 and experience v	with Python
	might be an advantage. No previous knowledge of physics is assumed.		
BI-QUA	Quality Assurance	KZ	4
	boduces students to the fundamentals of testing and quality management. Students will learn what the role of a tester is in the context of		
	will experience hands-on application testing using both manual and automated testing. At the end of the semester, the student should		
	In a set of test scenarios, prepare test data, automate an appropriate portion of the scenarios, and prepare a report on the bugs found	-	
BI-SAP.21	Computer Structure and Architecture	Z,ZK	5
-	acquainted with the basic architecture and units of a digital computer, understand the structure, function, and implementation of arith nunication, methods of data transfers between the units. The logic design and the implementation of a program-controlled simple procest	-	
memory, i/O comi	in the labs using programmable circuits (FPGA), a single-chip microcomputer, and modern design (EDA) tools.	ssor is practically if	Inplementeu
BI-SCE1	Computer Engineering Seminar I	Z	4
	mputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to	_	1
	ndividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the		
	professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teacher	-	
	semester.		
BI-SCE2	Computer Engineering Seminar II	Z	4
The Seminar of Co	mputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to	failures and attac	ks. Students
are approached i	ndividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the	subject is work wi	ith scientific
articles and other	professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teacher	s. The topics are r	new for each
	semester.		
BI-SKJ.21	Scripting Languages	Z,ZK	4
Students gain a g	eneral overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In additi	on, they gain a dee	eper insight
	into shell and some other particular scripting languages and will get practical experience with shell script programming.	:-	
BI-SOJ	Machine Oriented Languages	Z,ZK	4
	urse will gain an ability to create their own programs in the assembly language of the most common PC platform focusing on optimal us		
and efficient coope	eration of software with hardware. Next, there will be discussed x86 specifics of the majority of OSes from the application point of view lin	iked to higher leve	l languages.
	This knowledge will be used during reverse engineering, optimization, and evaluation of code security.	1/7	-
BI-SP1.21	Team Software Project 1	KZ	5
-	nands-on experience with the analysis, design, and prototyping of a large-scale software system. Theoretical support is provided in the hat teaches students necessary techniques and principles. Teams consisting of 4-6 students will work on a specific project. The teach		
-	ularly consults with the team (at the seminars) both the formal and material aspects of the software design. The resulting software art		
project leader, reg	and finished in the BIE-SP2 course.		a developed
BI-SP2.21	Team Software Project 2	KZ	5
	ds-on experience with the iterative development process while working on a large-scale software project. The first iteration is the result		-
-	follow-up, the functionality, testing, and documentation of the software system being developed will be emphasized. Students will work		
	her, in the role of the team and project leader, regularly consults with the team (at the seminars) the formal as well as material aspects		
BI-SQL.1	Language SQL, advanced	KZ	4
Module is based o	n knowledge obtained in BI-DBS. Students become familiar with advanced relational and non-relational features of SQL language. In pa	rticular stored pro	gram unites,
triggers, recursive	queries, OLAP support, object-relational constructions. Part of the course is dedicated to practical database optimization from the point of	of view of specialize	ed database
	lexes, clusters, index-organized tables, and materialized views. as well as from the point of view query optimization. Execution plan ar	-	-
will be discuss	ed. Lectures will usually discuss SQL standard, but many features will be demonstrated on Oracle DBMS. Seminars are based on Ora	cle DBMS and pa

BI-ZWU	Introduction to Web and User Interfaces	Z,ZK	4
	This course is presented in Czech.		
BIE-CSI	Introduction to Computer Science	Z	2
	tory class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in other fit		-
	iool students, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The go		
	principles of computer science for students to understand, early on, what computer science is, why things such as high-level programmer y are, and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer no		
	questions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are interest		
	than expected, or even less than before.		
BIE-EEC	English language external certificate	Z	4
The BIE-ECC cour	se can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in Engli	sh comparable to o	r exceeding
	the B2 level of the Common European Framework of Reference for Languages.		
BIE-IMA2	Introduction to Mathematics 2	Z	2
Students refresh a	and extend knowledge of elementary functions and their properties. Students understand basic mathematical principles and they are a	able to apply them i	in particular
	examples.		
BIE-SEG	Systems Engineering tory class on systems engineering for bachelor students in computer science. The goal of the class is to introduce basic principles of d		0 for students
	cessor and memory virtualization. Seeing and actually understanding virtualization is the overarching theme of the class. After taking		
	difference between processes and threads as well as emulation and virtualization, what virtual memory is and how it works, what cor		
	parallelism, and how processes and threads synchronize efficiently to overcome concurrency for communication.		
BIE-ZUM	Artificial Intelligence Fundamentals	Z,ZK	4
	duced to the fundamental problems in the Artificial Intelligence, and the basic methods for their solving. It focuses mainly on the classic		eas of state
space search, mul	ti-agent systems, game theory, planning, and machine learning. Modern soft-computing methods, including the evolutionary algorithm	s and the neural ne	etworks, will
	be presented as well.		
NI-AFP	Applied Functional Programming	KZ	5
	sented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional p		
the rise nowaday	s and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, master necessary competence of a software engineer: the theory and especially the practice.	ing this paradigm t	becomes a
NI-DDM		KZ	4
	Distributed Data Mining n state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands of	I I	
	ramework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations a	-	-
	approaches to parallelize other algorithms. The course is prezented in czech language.	·	
NI-DSP	Database Systems in Practes	Z,ZK	4
	This course is presented in Czech.		
NI-DZO	Digital Image Processing	Z,ZK	4
This course prese	ents a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical alg	orithms that are bo	oth easy to
	ve an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background that is also		
of digital image processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, HDR compression, de-blurring in			
	, abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray convigid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, ac		
	igia as possione image acionnation, nee-torn image registration, texture synthesis, interactive segmentation, colonization, painting, at	Joing Geptin, alpha	mauny.

NI-IAM	Internet and Multimedia	Z,ZK	4	
	se is focused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes acq	-		
	signals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical u			
	nissions. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the effe			
the quality and late	ncy of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording the	e scene up to the p	presentation	
	for audience.	1/7		
NI-LSM	Statistical Modelling Lab	KZ	5	
-	ented on a single and multi-target tracking. The student both learns the existing methods and tries to implement them. The stress is p			
available initititati	on and its modeling using numpy and scipy. The second half of the semester is focused on the design of methods and algorithms, an At this point, the subject is on the border of own research and may result in the topic of final work (diploma or bachelor thesi	-	properties.	
NI-MOP	Modern Object-Oriented Programming in Pharo	s). KZ	4	
	bgramming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, where			
	aplex modern applications. In this course, we build on the knowledge acquired in the course BI-OOP and aim to further deepen the skills			
	in modern pure object system Pharo (https://pharo.org). The course focuses on individual approach to students, their development no			
	ing object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to work of			
technologies in ter	ms of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct involvem	ent in the Pharo C	Consortium.	
NI-MPL	Managerial Psychology	ZK	2	
NI-MSI	Mathematical Structures in Computer Science	Z,ZK	4	
-	emantics of programming languages. Data types as continous lattices, Scott topology. Procedures as continuous mappings. The Scott	, ,		
	Introduction to category theory.			
NI-OLI	Linux Drivers	Z,ZK	4	
	g system is an important operating system for personal computer and also for embedded systems. Systems on chip and combining po	, ,	and FPGAs	
-	ability of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver development			
со	urse provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practication	al experience.		
NI-PDD	Data Preprocessing	Z,ZK	5	
Students learn to p	repare raw data for further processing and analysis. They learn what algorithms can be used to extract information from various data s	ources, such as im	hages, texts,	
time series, etc., a	and learn the skills to apply these theoretical concepts to solve specific problems in individual projects - e.g., extraction of characteris	tics from images o	r from web	
	pages.			
NI-PSD	Public Services Design	KZ	4	
	oduce students to specifics of UX, Service design and development for public sector. We will look into the design and development p	-		
suppliers (devs a	ind designesr) as well as clients. In small teams students will work on projects from partner organizations and will try out collaboration	1 with client repres	entatives.	
	Course is aimed at students-designers as well as clients.			
NI-PSL	Programming in Scala	Z,ZK	4	
	uces the modern programming language Scala which exploits object-functional paradigm. Scala comprises advance language feature		-	
advance standard I	ibrary. Scala enables to use of applications functional patterns e.g. H-List, Monads, etc. Scala is used by many powerful frameworks and Scalaz, etc.	libraries e.g. Play,	Cassandra,	
NI-REV		771	F	
	Reverse Engineering equainted with the essentials of reverse engineering of computer software. They will learn how processes start and what happens before	Z,ZK	5	
-	will understand how executable files are organized and how they interact with 3rd party libraries. Another part of the course is dedicated and how they interact with 3rd party libraries.			
	tten in C++. Students will also understand principles of disassemblers and obfuscation techniques. A part of the course will also be de			
	bugging work and which methods can be used to detect it. One of the lectures will be dedicated to the latest trends on the computer			
	the course is on the seminars, where students will solve practically oriented tasks from the real world.			
NI-SYP	Parsing and Compilers	Z,ZK	5	
The module builds	upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of va	rious variants and	applications	
	of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing.			
NI-TSP	Testing and Reliability	Z,ZK	5	
-	knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to pre-		-	
the intuitive path se	ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bu	ilt-in-self-test equip	oment. They	
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.			
NI-VCC	Virtualization and Cloud Computing	Z,ZK	5	
	in knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and			
acquainted with virtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficiently operate and optimize the				
	rameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effection and every computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in		-	
management of complex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in the use of modern integration and development tools (Continuous integration and development).				
NI-VYC	Computability	Z,ZK	4	
	Computability Classical theory of recursive functions and effective computability.	∠,∠r\	4
