Recomended pass through the study plan

Name of the pass: Bachelor specialization, Software Engineering, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor Specialization, Software Engineering, 2021

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatics

Type of study: Bachelor full-time

Note on the pass: In addition to purely elective courses, compulsory courses in neighboring specializations can also be enrolled here as electives. The BIE-ECC course can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in English comparable to or exceeding the B2 level of the Common European Framework of Reference for Languages.

Coding of roles of courses and groups of courses: P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of seme

List of courses of this pass:

Code	Name of the course	Completion	Credits
BI-SCE1	Computer Engineering Seminar I	Z	4
The Seminar of Co	mputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to	o failures and attac	ks. Students
are approached in	dividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the	subject is work wi	th scientific
articles and other p	professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teache	rs. The topics are r	ew for each
	semester.		
BIE-3DT.1	3D Printing	KZ	4
Students learn to o	besign three-dimensional objects optimized for printing on a RepRap printer and the printing itself. They will be able to design objects	, prepare for printir	ng and print
	in 3D.		
BIE-AAG.21	Automata and Grammars	Z,ZK	5
Students are introd	uced to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of finite	automata, regular	expression
and regular gramm	ars, translation finite automata, construction and use of pushdown automata, hierarchy of formal languages, relationships between fo	rmal languages an	d automata
Knowledge acquir	red through the module is applicable in designs of algorithms for searching in text, data compression, simple parsing and translation,	and design of digi	tal circuits.

	Windows Administration	Z,ZK	4
	stand the architecture and internals of the Windows OS and acquire the skills to administrate the Windows OS. They are able use the		
security tools a	and apply advanced ActiveDirectory administration methods. They are able to solve problems by applying appropriate troubleshooting heterogeneous systems. Students are able to effectively configure centralised administration of a computer network.	methods and admi	nistrate
BIE-AG1.21	Algorithms and Graphs 1	Z,ZK	5
	rs the basics from the efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computi		
	t BIE-AAG and BIE-ZDM courses in which the students gain the basic skills and knowledge needed for time and space complexity of	-	
	practically the asymptotic mathematics.	-	
BIE-BAP.21	Bachelor Thesis	Z	14
BIE-BPR.21	Bachelor Project	Z	1
At the beginning	of the semester the student will contact the supervisor of the bachelor thesis he has booked. They will discuss the partial tasks that s	tudent will perform of	during the
	semester. If he fulfill these tasks, the supervisor will award him / her at the end of the semester with the BI-BPR course.		
BIE-CCN	Compiler Construction	Z,ZK	5
	uctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles and the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching	-	
BIE-CSI	Introduction to Computer Science	7	2
	tory class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in other file		
	ool students, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The gr		
-	principles of computer science for students to understand, early on, what computer science is, why things such as high-level program		
	y are, and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer no		
questions but also	questions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are interest	sted in computer sci	ience more
	than expected, or even less than before.	1/7	
BIE-CZ0	Czech Language for Foreigners Course Czech for foreigners offers the basic topics of conversation: Introductions, Orientation, Shopping, Work / Study, Travel, Time	KZ	2
			2
BIE-CZ1.21	Czech Language for Foreigners II ended for Students of English programmes who have completed BIE-CZ0 course or have basic knowledge of the Czech language. Th	KZ	
	c vocabulary and clarifies the structure of the Czech language structure with regard to the practical needs of Students residing in the		
BIE-DBS.21	Database Systems	Z,ZK	5
	anted with the architecture of the database engine and typical user roles. They learn to design the structure of a smaller data store (· · ·	-
	model and then implement them in a relational database engine. They get acquainted with the SQL language and also with its theoret		
model. They will g	et acquainted with the principles of relational database schema normalization. They understand the basic concepts of transaction pro	-	l of parallel
	user access to a single data source. At the end of the course, students will be introduced to alternative nonrelational database n		
BIE-DIF	Differential equations	Z,ZK	5
-	es a foundational overview of differential equations, starting with basic motivation and examples of ODEs and progressing to essential so theorems on existence and uniqueness establish when solutions can be guaranteed. Linear and system-based ODEs are covered wi		
		in memous like cha

BIE-IMA2	Introduction to Mathematics 2	Z	2
	nd extend knowledge of elementary functions and their properties. Students understand basic mathematical principles and they are a		
	examples.		n partioulai
BIE-KAB.21	Cryptography and Security	Z,ZK	5
	lerstand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to	· · ·	-
certificates in syst	ems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in appl	ications. Within lab	s, students
will gain practical	skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic procedures of	of cryptanalysis. Stu	udents are
	expected to be competent programmers in C/C++ (on a small scale). Basic Python knowledge is an advantage.		
BIE-KOM.21	Conceptual Modelling	Z,ZK	5
	ised on developing abstract thinking and precise formulation skills using conceptual models. Students learn skills of discerning key te		-
, , , , , , , , , , , , , , , , , , ,	cify correct relations in complex systems of social reality, mostly enterprises and institutions. Students learn basics of ontological struct	e e	
-	r learn how to express business rules and constraints using the OCL language and foundations of OWL/RDF semantic data represent		-
learn the foundatio	ns of enterprise engineering, being a discipline for conceptual modelling of enterprises and institutes and their processes. The DEMO n will be taught. The course is designed with the respect to continuation in software implementations.	iethod and the BPI	vin notation
BIE-LA1.21		Z.ZK	5
	Linear Algebra 1 students to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the field	, , ,	-
	fields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian eliminate		
	ith linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eigenv		
	matrix. We will also demonstrate some applications of these concepts in computer science.	0	
BIE-MA1.21	Mathematical Analysis 1	Z,ZK	5
We begin the cours	se by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numbers.	Then we study real	sequences
and real functions of	of a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of function	ons. This theoretica	l foundation
	ot-finding problems (iterative method of bisection and Newtons method), construction of cubic interpolation (spline), and formulation and		-
	ssue of finding extrema of functions). The course is closed with the Landaus asymptotic notation and methods of mathematical descripti		-
BIE-MA2.21	Mathematical Analysis 2	Z,ZK	6
	etes the theme of analysis of real functions of a real variable initiated in BIE-MA1 by introducing the Riemann integral. Students will le	-	
	ution method. The next part of the course is devoted to number series, and Taylor polynomials and series. We apply Taylors theorem to	-	-
	escribed accuracy. Then we study the linear recurrence equations with constant coefficients, the complexity of recursive algorithms, an we introduce the student to the theory of multivariate functions. After establishing basic concepts of partial derivative, gradient, and h		
-	f localization of local extrema of multivariate functions as well as the numerical descent method. We conclude the course with the integ		-
BIE-OOP	Object-Oriented Programming	Z,ZK	4
	rogramming has been used in the last 50 years to solve computational problems by using graphs of objects that collaborate together	· · · ·	
	some of the main principles of object-oriented programming and design. The emphasis is on practical techniques for software develo		-
	handing, refactoring and design patterns.		-
BIE-OOP.21	Object-Oriented Programming	Z,ZK	5
Object-oriented p	rogramming has been used in the last 50 years to solve computational problems by using graphs of objects that collaborate together	by message passi	ng. In this
course students ge	t acquainted with the main principles of object-oriented programming and design, used in modern programming languages. The emph	asis is on practical	techniques
	for developing software, which includes testing, error handing, refactoring, and application of design pattern.	T	
BIE-OSY.21	Operating Systems	Z,ZK	5
	s a follow-up of the Unix-like operating systems course students deepen their knowledge in areas of OS kernels, process and thread import of a students deepend and a students of the students		
critical regions, thre	ead scheduling, shared resource allocation and deadlocks, management of virtual memory and data storages, file systems, OS moni and implement simple multithreaded applications. General principles are illustrated on operating systems Solaris, Linux, or MS W		le to design
BIE-PA1.21	Programming and Algorithmics 1	Z,ZK	7
	construct algorithms for solving basic problems and write them in the C language. They master data types (simple, pointers, structure		
	esented in C language. They understand the principle of recursion and basics of algorithm complexity analysis. They know fundamen		
	sorting, and manipulating linked lists and trees.		
BIE-PA2.21	Programming and Algorithmics 2	Z,ZK	7
	instruments of object-oriented programming and are able to use them for specifying and implementing abstract data types (stack, que		
table). They lear	n these skills using the C++ programming language and are introduced to all C++ features needed in object-oriented programming (e	.g., template progr	amming,
	copying/moving of objects, operator overloading, inheritance, polymorphism).		
BIE-PAI.21	Law and Informatics	ZK	5
	urse is to introduce students into the basic legal instruments that they will encounter in their practice. Students will gain knowledge of	-	
	ill be alerted to the pitfalls that await them in business from the point of view of law. They will understand the process of concluding co		
	now their responsibilities in working with the Internet, will be familiar with the institutes of intellectual property law, and will be able to		
	icenses. Emphasis will also be put on the legal protection of data on the Internet, the registration of Internet domains and protection a rted to such behaviour in the field of IT that can be classified as criminal under the Czech law. The course will also include analyses c	-	
BIE-PJV		Z,ZK	4
-	Programming in Java mming in Java will introduce students to the object oriented programming in Java programming language. Beside of basics of Java la	· · ·	
	will also be presented, especially data structures, files, GUI, networking, databases and concurrent APIs.		
BIE-PKM	Preparatory Mathematics	Z	4
	The purpose of Preparatory Mathematics is to help students revise the most important topics of high-school mathematics.	1	
BIE-PPA.21	Programming Paradigms	Z,ZK	5
	with basic paradigms of high-level programming languages, including their basic execution models, benefits, and limitations of partic		
	digm and its basic principles are explained in details. Logic programming is introduced as another way of declarative programming. Th		

on lambda calculus and on Lisp (Racket) and Prolog programming languages. Moreover, usage of these principles is demonstrated on modern mainstream programming languages

such as C++ and Java.	1 0 0	
BIE-PRR.21 Project management	Z,ZK	5
The aim of the course is to introduce students into the basic concepts and principles of project management, i.e. methods of planning, teamwork, analy	-	
project, communication, argumentation and meeting management. Students will practice project management techniques (e.g. SWOT analysis, risk as		-
Gantt charts, resource schedule, resource balancing, network graphs) and creation of project documentation. The course is designed especially for stu deepening their knowledge outside IT, consider starting their own company, or have ambitions to work in middle or senior management positions in large		
also suitable for all those who will develop software or hardware in the form of team projects.		
BIE-PS2 Programming in shell 2	Z,ZK	4
Students get a general overview of scripting languages, introduction into syntax, semantics, programming style, data structures, pros and cons. In additional structures is a structure of scripting language of the syntax semantics semantics of the syntax semantics of the	on, they gain a de	eper insight
into Bourne Again shell and some other particular scripting languages and will get practical experience with shell script programming. Note to Erasmus stu		
the lectures to provide even very basic Bourne shell usage. Depending on actual knowledge of the students, orientation in user filesystem tools (cp, In, I	. ,	
data filtering tools (cut, tr, sort, uniq) can be provided. The advantage of this module is that we do not stop at this point - we will show you also a sele techniques used in practice.	ction of advanced	rschpung
BIE-PSI.21 Computer Networks	Z,ZK	5
The course introduces students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in local networking.		-
well. The lectures will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced netw		
practically verify configurations and management of network devices in the lab within the environment of the operating systems Linux ar	nd Cisco IOS.	
BIE-PST.21 Probability and Statistics	Z,ZK	5
Students will learn the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variables. The	-	
models of random variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical induction t estimations of unknown distributional parameters from random sample characteristics. They will also be introduced to the methods for testing statistical		
the statistical dependence of two or more random variables.	hypotheses and d	etermining
BIE-SAP.21 Computer Structures and Architectures	Z.ZK	5
Students understand basic digital computer units and their structures, functions, and hardware implementation: ALU, control unit, memory system, inpu	,	-
transfer. In the labs, students gain practical experience with the design and implementation of the logic of a simple processor using modern d	igital design tools.	
BIE-SCE1 Computer Engineering Seminar I	Z	4

	course is intended primarily for those students who have chosen the topic of their bachelor's thesis or will choose it within the first 14	days of teaching.	Nithin the		
	exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed.				
The eigen of the eeg	Java Technology	Z,ZK	5		
	urse is to provide knowledge and skills needed for the development of smaller and larger information systems. Students will get acqua be able to apply these concepts using libraries and tools from the ecosystem of the Java programming language. After completing the	-			
to participate in the development of software systems on the Java platform. Students are assumed to be acquainted with the following topics (they are used and not taught in this					
	course): Java language syntax, SQL, git version control system, Docker, continuous integration.				
BIE-TUR.21	User Interface Design	Z.ZK	5		
	asic overview of methods for designing and testing common user interfaces. They get experience to solve the problems where softwa	, ,			
•	the user optimally, since the needs and characteristics of users are not taken into account during product development. Students gain				
	bring users into the development process to ensure optimal interface for them.				
BIE-TZP.21	Technological Fundamentals of Computers	Z,ZK	5		
	ainted with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how computer st		t the lowest		
level. They are intr	roduced to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to redu	ce the consumptio	n; what the		
limits to the maximum operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a computer power supply looks like					
	(in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica.				
BIE-UOS.21	Unix-like Operating Systems	KZ	5		
	g systems represent a large family mostly open-source codes that kept bringing during the history of computers efficient innovative fu				
	uters and their networks and clusters. The most popular OS today, Android, has a unix kernel. Students get overview of basic propert		-		
processes and threads, access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the level of advanced users who are not					
	e to utilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting ini				
BIE-VAK.21	Selected Combinatorics Applications	Z	3		
	b introduce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to the basis		-		
issue from applications to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some basic data structures. Furthermore, with the active participation of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical) informatics. Areas from which we					
	ns to be solved will include, for example, graph theory, combinatorial and algorithmic game theory, approximation algorithms, optimize				
	also try to implement solutions to the studied problems with a special focus on the effective use of existing tools.				
BIE-VMM	Selected Mathematical Methods	Z,ZK	4		
	s with an introduction to the analysis of complex functions of a complex variable. Next, we present the Lebesgue integral. We then add	· · ·			
	r, we introduce and study the properties of the Discrete Fourier Transform (DFT) and its fast implementation (FFT). We discuss the wa				
	he linear programming problem in more detail and its solution using the Simplex algorithm. Each topic is demonstrated with interestin				
BIE-VR1.21	Virtual reality I	KZ	4		
Introduction to Vi	tual Reality (VR), virtual reality operations, metaverse, and creation. Rules and requirements for virtual worlds communication. The communication are communication.	ourse focuses on t	ne ways of		
	creating virtual reality worlds and interactive activities in 3D worlds. It improves computational thinking, empathy, and shared social	activities.			
BIE-ZRS	Basics of Systems Control	Z,ZK	4		
-		Optional subject Basics of System Control is designed for anyone interested in applied computer science in bachelor studies. A brief introduction to the field of automatic control will			
be definitely evaluated by our graduates in the industrial practice. Students will gain knowledge in this rapidly evolving field of great future. We will focus our attention particularly on
