Recomended pass through the study plan

Name of the pass:

Faculty/Institute/Others: Faculty of Electrical Engineering

Department:

Pass through the study plan: Software Engineering and Technology

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Software Engineering and Technology

Type of study: Bachelor full-time

Note on the pass:

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

List of courses of this pass:

Code	Name of the course	Completion	Credits
B0B04B2Z	English language B2 - exam	Z,ZK	0
I) The B2 English E	xam is a compulsory subject for all Faculty of Electrical Engineering students at the Czech Technical University. According to the Stu	dy and Examinatio	n Rules and
Regulations for St	idents at CTU (Part III, Article 4), a compulsory subject is one "whose completion is a necessary condition in order to successfully or	emplete the study p	rogramme."
In addition, this r	equires the "passing of an examination evaluated on the scale A, B, C, D, or E…" (SERR Part III, Article 6). II) According to the Comi	non European Frar	mework of
Reference for Lang	juages (CEFR), an international standard for describing language ability, the definition of an English language learner who has achieve	ed the B2 (Upper-In	ntermediate)
level is one who ".	can understand the main ideas of complex text on both concrete and abstract topics, including technical discussions in his/her field	of specialisation.	Can interact
with a degree of t	luency and spontaneity that makes regular interaction with native speakers quite possible without strain for either party. Can produce	clear, detailed text	t on a wide
range of subjects	and explain a viewpoint on a topical issue giving the advantages and disadvantages of various options." III) Students who have succ	essfully passed an	approved
international exam	within the past five years may present their certificate to the Department of Languages, Faculty of Electrical Engineering. Upon approximation of the Popular Control of Control	oval, students are t	hen exempt
I	from both the Written Test and the Oral Part. For a list of approved international exams go the department website: http://jazyky.fe	I.cvut.cz/	
B0B36DBS	Database Systems	Z,ZK	6
The course is desi	ned as a basic database course mainly aimed at the student ability to design a relational data model and to use the SQL language	or data definition a	s well as for
data querying an	d to choose the appropriate degree of transaction isolation. Students will also get acquainted with the most commonly used indexing	techniques, databa	ase system
	architecture and their management. They will verify their knowledge during the elaboration of a continuously submitted semina	r task.	
B0B36PJV	Programming in Java	Z,ZK	6
The course builds	on the basics of algorithms and programming from the first semester and introduces students to the Java environment. The course al	so focus on the ob	ject concept
of the Java langua	ge. The topics of the course includes exceptions, event handling, and building a graphical interface. Basic library methods, working wi	th files and using g	eneric types
will be introduced.	An important topic is models of multithreaded applications and their implementation. Practical exercises of practical skills and knowled	lge of Java is tested	d in the form
of solving partial ta	isks and semester work, which will be submitted continuously through the source code version control system. The semester work so	coring consists of p	oints for the
	correctness and efficiency of the code, as well as points that take into account the quality of the source codes, their readability and	reusability.	
B0B36ZAL	Introduction to Programming	Z,ZK	6
B0B39KAJ	Client applications in JavaScript	Z,ZK	5
B0B39SPS	Computer Networks Administration	KZ	5
B0M32KSB	Cryptography and Network Security	Z,ZK	6
The Information Se	curity course provides a complete source of information on the field of security of information systems and information technologies. T	he most of informa	tion in today
society is create	d, transferred, stored in electronic form so information security is very important part of it. Technical background for information secur	ity is provided by c	ryptology.
B2M32DSVA	Distributed Computing	Z,ZK	6
The course is foci	ised on technologies that support distributed computing: on mechanisms ensuring reliable, efficient and secure connection of applica	ation processes, pro	ogramming
interfaces of cor	nmunication channels and up-to-date middleware technologies. A significant part of lectures is dedicated to distributed algorithms that	at assure causality,	exclusive
	access, deadlock detection/avoidance, fault-tolerance, mobile computing, and security.		
B2M32PST	Advanced Networking Technologies	Z,ZK	6
Subject Advanced	Network Technologies expands students' knowledge of modern network technologies. The course is practically oriented and focuse	d on explaining the	function of

advanced network protocols as used in modern data networks of today and tomorrow. Students will gain practical experience with the issues like Internet routing, software-defined networks, multicast routing, IPv6, and MPLS networks. Part of the course is also devoted to a detailed explanation of transport protocols TCP/UDP and a manner in which software applications can access transportation services of TCP/IP data networks.

	Linear Algebra	Z,ZK	7
B6B01MAA	Mathematics Analysis	Z,ZK	5
nis course is an in	troduction to differential and integral calculus. It covers basic properties of functions, limits of functions, derivative and its applications and definite/indefinite integral with its applications, sequences and series.	(graphing, Taylo	r polynomia
B6B01PRA	Statistics and Probability	Z,ZK	5
	be introduced to the theory of probability and mathematical statistics, namely to the basic computing methods and their applications in	•	
	robability and mathematical statistics. The first part is focused on classical probability, including conditional probability. The next part de		-
	distributions, examples of the most important types of discrete and continuous distributions, numerical characteristics of random variab	•	
	sformations. Probabilistic knowledge is then used in the description of statistical methods for estimating distribution parameters and to		_
B6B01ZDM	Introduction to Discrete Mathematics wheges of mathematics are required at the beginning of this course. Using illustrative examples we build sufficient understanding of c	Z,ZK	5
ino auvanceu kno	theory. Then we proceed to formal construction of propositional calculus.	ombinatorics, sei	anu grapn
B6B16INS	Information Systems	KZ	4
	urse is to familiarise students with the information systems topic and information systems implementation principles. During the cours		1
	xisting types of systems and their usage in specific industry segments. Students are familiarised with the CRM, ERP, MRP and other t		
The fundament	tal part of the course is the introduction to key ideas of an information system selection, evaluation of information system benefits, wa	ys of information	systems
•	d information system implementation based on the project management principles. The emphasis is on the initial customer analysis, or	_	-
	better to implement any existing information system or to develop a new one from scratch. These factors determine the information system of the control of t		
	of the course information systems security, operation, support, maintenance, legislation impacts, and government information systems

BEZZ Basic health and occupational safety regulations Z 0
The guidelines were worked out based on The Training Scheme for Health and Occupational Safety designed for employees and students of the Czech Technical University in Prague,

which was provided by the Rector's Office of the CTU. Safety is considered one of the basic duties of all employees and students. The knowledge of Health and Occupational Safety regulations forms an integral and permanent part of qualification requirements. This program is obligatory.

For updated information see http://bilakniha.cvut.cz/en/f3.html Generated: day 2024-05-17, time 13:33.
