Recomended pass through the study plan

Name of the pass: Bachelor specialization Computer Systems and Virtualization, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor specialization Computer Systems and Virtualization, 2021

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatics

Type of study: Bachelor full-time

Note on the pass: In addition to purely elective courses, compulsory courses in neighboring specializations can also be enrolled here as electives. The BIE-ECC course can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in English comparable to or exceeding the B2 level of the Common European Framework of Reference for Languages.

Coding of roles of courses and groups of courses: P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

List of courses of this pass:

Code	Name of the course	Completion	Credits					
BI-SCE1	Z	4						
The Seminar of Co	Computer Engineering Seminar I mputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to	b failures and attac	ks. Students					
are approached in	dividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the	subject is work wi	th scientific					
articles and other p	professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teacher	rs. The topics are n	ew for each					
	semester.							
BIE-3DT.1	3D Printing	KZ	4					
Students learn to o	Students learn to design three-dimensional objects optimized for printing on a RepRap printer and the printing itself. They will be able to design objects, prepare for printing and print							
	in 3D.							

BIE-AAG.21	Automata and Grammars	Z,ZK	5
	duced to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of finite	1 1	expressions
and regular gramn	nars, translation finite automata, construction and use of pushdown automata, hierarchy of formal languages, relationships between fo	rmal languages and	d automata.
Knowledge acqu	ired through the module is applicable in designs of algorithms for searching in text, data compression, simple parsing and translation,	and design of digit	tal circuits.
BIE-ADU.21	Unix Administration	Z,ZK	5
Students will learn	the internal structure of the UNIX operating system, with the administration of its basic subsystems and with the security principles. They	will understand the	differences
between user and	administrator roles. They will get theoretical and practical knowledge of user management and administration, of users access rights,	file systems, disk s	subsystems,
processes, mem	ory, network services and remote access, and in the areas of system deployment and virtualization. In the labs, they will verify the known specific examples from practice.	owledge from the le	ectures on
BIE-ADW.1	Windows Administration	Z,ZK	4
Students under	stand the architecture and internals of the Windows OS and acquire the skills to administrate the Windows OS. They are able use the	standard administr	ation and
security tools a	and apply advanced ActiveDirectory administration methods. They are able to solve problems by applying appropriate troubleshooting	methods and adm	inistrate
	heterogeneous systems. Students are able to effectively configure centralised administration of a computer network.		
BIE-AG1.21	Algorithms and Graphs 1	Z,ZK	5
	rs the basics from the efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computi	-	
with the concurrer	tt BIE-AAG and BIE-ZDM courses in which the students gain the basic skills and knowledge needed for time and space complexity of	algorithms and lear	rn to handle
	practically the asymptotic mathematics.		
BIE-APS.21	Architectures of Computer Systems	Z,ZK	5
	rn the construction principles of internal architecture of computers with universal processors at the level of machine instructions. Spec		
1	on processing and on the memory hierarchy. Students will understand the basic concepts of RISC and CISC architectures and the printing is an even while accurate and the printing is an even while accurate accurate and the printing is an even while accurate	•	
-	ar processors, but also in superscalar processors that can execute multiple instructions in one cycle, while ensuring the correctness of	-	
program. The cour	se further elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory cohe systems.	Tence and consiste	ancy in Such
BIE-AWD.21		Z.ZK	5
	cquainted with the administration of database and web servers and services. They will be able to install, configure, operate, test, and	1 ' 1	-
-	vice systems. The principles will be demonstrated on the PostgreSQL relational database engine and Apache will be used as an exan		
BIE-BAP.21	Bachelor Thesis	Z	14
BIE-BIG.21	DB Technologies for Big Data	KZ	5
	troduced into the field of Big Data processing where nonrelational (NoSQL) database engines are typically used today. The course is f se students were able to choose suitable tools (mostly open source) and techniques, design and implement a simplest reproducible mo		
-	mation/aggregation, presentation). Students get acquainted with various architectures for processing and storing big data. A theoretic		
	of individual technologies will be supplemented with specific case studies.		
BIE-BPR.21	Bachelor Project	7	1
	of the semester the student will contact the supervisor of the bachelor thesis he has booked. They will discuss the partial tasks that s	tudent will perform	during the
	semester. If he fulfill these tasks, the supervisor will award him / her at the end of the semester with the BI-BPR course.	indent im periori	aaniguio
BIE-CCN	Compiler Construction	Z,ZK	5
	Juctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles	1 · · ·	
	and the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching	-	
BIE-CSI	Introduction to Computer Science	Z	2
	tory class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in other fi	1 1	
science, high-sch	nool students, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The g	cal of the class is to	o introduce
and relate basic	principles of computer science for students to understand, early on, what computer science is, why things such as high-level program	ming languages an	d tools are
done the way the	y are, and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer no	t just basic comput	ter science
questions but also	questions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are interest	sted in computer so	cience more
	than expected, or even less than before.		
BIE-CZ0	Czech Language for Foreigners	KZ	2
	Course Czech for foreigners offers the basic topics of conversation: Introductions, Orientation, Shopping, Work / Study, Travel, Tim	-	
BIE-CZ1.21	Czech Language for Foreigners II	KZ	2
	ended for Students of English programmes who have completed BIE-CZ0 course or have basic knowledge of the Czech language. The		pands the
	c vocabulary and clarifies the structure of the Czech language structure with regard to the practical needs of Students residing in the		
BIE-DBS.21	Database Systems	Z,ZK	5
	uainted with the architecture of the database engine and typical user roles. They learn to design the structure of a smaller data store (
	I model and then implement them in a relational database engine. They get acquainted with the SQL language and also with its theored the tacquainted with the principles of relational database schema normalization. They understand the basic concepts of transaction pro		
model. They will g	user access to a single data source. At the end of the course, students will be introduced to alternative nonrelational database non-	•	o paraller
		Z,ZK	F
BIE-DML.21	Discrete Mathematics and Logic acquainted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts fro		5 ovplained
-	s paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The cours	-	
opeoial attention i	combinatorics and number theory, with emphasis on modular arithmetics.	ie also lays down a

	rse can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in Engli	1 – 1	-
	the B2 level of the Common European Framework of Reference for Languages.		
BIE-EHD	Introduction to European Economic History	Z,ZK	3
	luces a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global eco	1 1	
	s in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic		
	npire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial institut		
	etailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and c	-	tory. Class
	etailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and o meetings will consist of a mixture of lecture and discussion.	-	tory. Class
BIE-EPR		-	tory. Class 1
BIE-EPR	meetings will consist of a mixture of lecture and discussion.	organizations in his	1

BIE-FTR.1	Financial Markets	Z,ZK	5
Financial sector	has been deeply transformed in the recent years, which led to a development of structured financial products, a new point of view on	the issue of credit	risk, and
-	rket activities. The need to use and properly apply mathematical and technical tools is emphasized. To manage their financial activitie	-	-
	nools who have sufficient knowledge ICT and mathematics, and who have at the same time an understanding of the functioning of fin		
	se thus englobes both a description of financial markets and related economic theories, and an overview of mathematical and statistic		
BIE-GIT.21	SW Development Technologies	Z	3
This course is aim	ed at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to		on manager
515 114 6	from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use		
BIE-HAS	Human Factors in Cryptography and Security	Z,ZK	5
This course is for	students interested not only in technical scope of computer science, but also in making products usable - for users and for developer	s. Students of this c	course can
	use their gained knowledge to design, plan and analyse their own projects in the context of human-centered security.		
BIE-IDO.21	Introduction to DevOps	Z,ZK	5
	vith the topic of DevOps and prepares future developers and administrators for a modern culture of development and operation of sys		
	o support software development, testing and compilation. It also focuses on tools for automating infrastructure management and build		
the Cloud. It is an	introduction to technologies that will then be discussed in more detail in related follow-up courses. The student will also get acquaint used in practice.	ed with modern led	nnologies
BIE-IMA		Z	4
	Introduction to Mathematics	. – .	•
Students refresh a	nd extend knowledge of elementary functions and their properties. Students understand basic mathematical principles and they are a examples.	able to apply them i	n particular
BIE-IMA2		Z	2
	Introduction to Mathematics 2	I – I	
Students tellesit a	nd extend knowledge of elementary functions and their properties. Students understand basic mathematical principles and they are a examples.		n particulai
BIE-KAB.21		Z,ZK	5
	Cryptography and Security derstand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to	· · ·	
	ems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in appl	,	
	skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic procedures of		
win gain practical	expected to be competent programmers in C/C++ (on a small scale). Basic Python knowledge is an advantage.		
BIE-LA1.21	Linear Algebra 1	Z,ZK	5
	students to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the field	· · ·	-
	fields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian elimin-		
	vith linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eigen		
	matrix. We will also demonstrate some applications of these concepts in computer science.		
BIE-MA1.21	Mathematical Analysis 1	Z,ZK	5
	se by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numbers.	I ' I	-
-			ooquonooo
l and real functions of	of a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of functions are also below the second se	ons. This theoretica	I foundation

They are int limits to the maxir BIE-UOS.21 Unix-like operatin	Documentation and Presentation ised on the basics of creating electronic documentation with emphasis on the creation of technical reports of a larger scope, typically fit to f a technical report in the LaTeX system, process an electronic presentation using the LaTeX Beamer system, and practically prese course is intended primarily for those students who have chosen the topic of their bachelor's thesis or will choose it within the first 14 exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed. User Interface Design pasic overview of methods for designing and testing common user interfaces. They get experience to solve the problems where software the user optimally, since the needs and characteristics of users are not taken into account during product development. Students gain bring users into the development process to ensure optimal interface for them. Technological Fundamentals of Computers ainted with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how computer st roduced to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to redunum operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a com (in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica.	KZ nal university these nt it in front of class days of teaching. Students smates and Within the 5 icts do not ethods that 5 t the lowest n; what the y looks like 5 r operating

processes and threads, access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the level of advanced users who are not

only able to utilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting interface, called shell.			
BIE-VAK.21	Selected Combinatorics Applications	Z	3
The course aims to introduce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to the basic courses, we approach the			
issue from applications to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some basic data structures. Furthermore,			
with the active participation of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical) informatics. Areas from which we			
will select problems to be solved will include, for example, graph theory, combinatorial and algorithmic game theory, approximation algorithms, optimization and more. Students will			
also try to implement solutions to the studied problems with a special focus on the effective use of existing tools.			
BIE-VDC.21	Virtualization and Data Centers	Z,ZK	5
The aim of the course is to familiarize students with technology basis of cloud computer systems. It shows principles and techniques used in design and implementation of data center			
infrastructure, such as various kinds of virtualization and high availability of servers, storages, and software layers. The course guides through data center technologies from private			
to public and hybrid clouds. Student learn current trends in the architecture of IT infrastructure and its configuration for classic and cloud applications. Students will understand the			
design, validation, and operation of complex infrastructures for modern applications with respect to scalability and protection against overloads, outages, and data losses.			
BIE-VES	Embedded Systems	Z,ZK	5
Students learn to design embedded systems and develop software for them. They get basic knowledge of the most common microcontrollers and embedded processors, their integrated			
peripheral circuits, programming methods, and applications. They get practical skills with development kits and tools.			
BIE-VPS.21	Selected Topics in Computer Networking	Z,ZK	5
The course builds u	pon the Computer Networks course (BI-PSI), obligatory for the program. Students will learn in detail principles, protocols, and technolo	gies used in mode	rn computer
networks from local area networks up to Internet, with focus on switching, routing, security, and virtualization. The emphasis will be on gaining practical experience with real network			
devices in the lab and learning important methods of local area and wide area networks from the viewpoint of functionality, performance, and security.			
BIE-VR1.21	Virtual reality I	KZ	4
Introduction to Vir	tual Reality (VR), virtual reality operations, metaverse, and creation. Rules and requirements for virtual worlds communication. The c	ourse focuses on t	he ways of
creating virtual reality worlds and interactive activities in 3D worlds. It improves computational thinking, empathy, and shared social activities.
