## Recomended pass through the study plan

# Name of the pass: Bachelor program, unspecified specialization, part-time, in Czech, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor program, unspecified specialization, part-time, in Czech, 2021 Branch of study guranteed by the department: Unspecified Branch/Specialisation of Study Guarantor of the study branch: doc. RNDr. Ing. Marcel Ji ina, Ph.D.

Program of study: Informatika

Type of study: Bachelor combined

Note on the pass: Vedle ist volitelných p edm t si zapisujte jako (zatím) volitelné p edm ty i povinné p edm ty specializace, do které se hodláte profilovat. - Chcete-li splnit povinnost, danou skupinou "Zkouška z angli tiny 2021", p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L): KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

#### List of courses of this pass:

Code	Name of the course	Completion	Credits
BI-ANG	English Language, Internal Certificate	ZK	2
	Course information and teaching materials can be found at https://moodle-vyuka.cvut.cz/course/search.php?search=BI-AN	G	
BI-ANG1	English Language Examination without Preparatory Courses	Z,ZK	2
BI-BAP.21	Bachelor Thesis	Z	14

BIE-EEC	English language external certificate	Z	4
-	se can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in Engli	_	-
	the B2 level of the Common European Framework of Reference for Languages.	•	Ŭ
BIK-AAG.21	Automata and Grammars	Z,ZK	5
	uced to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of finite a		expressions,
and regular gramm	ars, translation finite automata, construction and use of pushdown automata, hierarchy of formal languages. Knowledge acquired thr	ough the module is	s applicable
	to creation of algorithms for pattern matching, data compression, translation, simple parsing, and creation of digital circuits	i.	
BIK-ADU.21	Unix Administration	Z,ZK	5
Students will learn t	he internal structure of the UNIX operating system, with the administration of its basic subsystems and with the security principles. They	will understand the	differences
between user and a	administrator roles. They will get theoretical and practical knowledge of user management and administration, of users access rights,	file systems, disk s	subsystems,
processes, memo	ry, network services and remote access, and in the areas of system deployment and virtualization. In the labs, they will verify the known	owledge from the le	ectures on
	specific examples from practice.		
BIK-ADW.1	Windows Administration	Z,ZK	4
	This course is presented in Czech.		
BIK-AG1.21	Algorithms and Graphs 1	Z,ZK	5
The course is pr	esented in Czech. The course covers the basics from the efficient algorithm design, data structures, and graph theory, belonging to t	he core knowledge	e of every
	m. Students learn techniques of proofs of correctness of algorithms and techniques of asymptotic mathematics for estimation of their		
or average case (th	e course includes basics from probability theory needed for understanding randomized algorithms). Within exercises students learn app	olications of studied	d algorithms
	for solving practical problems.		
BIK-APS.21	Architectures of Computer Systems	Z,ZK	5
	n the construction principles of internal architecture of computers with universal processors at the level of machine instructions. Spec		
	processing and on the memory hierarchy. Students will understand the basic concepts of RISC and CISC architectures and the prince		
	processors, but also in superscalar processors that can execute multiple instructions in one cycle, while ensuring the correctness of	-	
program. The cours	e further elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory cohe	rence and consiste	ency in such
	systems.		
BIK-ASB.21	Applied Network Security	Z,ZK	5
	rse is to introduce selected topics from computer networks in terms of cybersecurity. These topics extend the basic knowledge gaine		
security applicati	ons like the public key infrastructure, encrypted network protocols, link and network layer security or wireless networks. After finishing	g the course stude	nt will get
	knowledge of security applications in computer networks.		
BIK-BEK.21	Secure Code	Z,ZK	5
	arn how to assess security risks and how to take them into account in the design phase of their own code and solutions. After getting fa		-
	gain practical experience with running programs with reduced privileges and methods of specifying these privileges, since not every		
	leges. Dangers inherent in buffer overflows will be practically demonstrated. Students will be introduced to the principles of securing		-
	database systems, web, remote procedure calls, and sockets in general. The module concludes with Denial of Service attacks and the	e defense against	
BIK-BPR.21	Bachelor project		
-	g of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the		
	semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR at t enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvu		
	nd signed form will be handed over by the student to the head of the Department of Defense, who will record the credit in KOS. 3. If t	,	· /
	red is formulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tunin	-	
Student has reserve	assignment can be supplemented and approved at the end of the semester.	ig the assignment	30 that the
BIK-DBS.21	Database Systems	Z,ZK	5
	ainted with the architecture of the database engine and typical user roles. They learn to design the structure of a smaller data store (i		-
	model and then implement them in a relational database engine. They get acquainted with the SQL language and also with its theoret		
	t acquainted with the principles of relational database schema normalization. They understand the basic concepts of transaction pro		
	user access to a single data source. At the end of the course, students will be introduced to alternative nonrelational database m	-	
BIK-DML.21	Discrete Mathematics and Logic	Z,ZK	5
	equainted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts fro		
	paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The cours		
	combinatorics and number theory, with emphasis on modular arithmetics.	,	
BIK-EHA.21	Ethical Hacking	Z,ZK	5
	professional and academic introduction to computer and information security using the ethical hacking approach, which enables improv	· ·	
-	t when discovering vulnerabilities, hands-on experience with different attacks, facilitates linking theory and practice in significant area		
	can therefore be utilized by (future) security professionals, (informed) decision-makers, (savvy) users and developers alike		-
BIK-EJA	Enterprise Java	KZ	4
	Java technologies (Jakarta EE, Microprofile, etc.) which are used for the development of EIS (Enterprise Information Systems). These	1	
per	sistent data, are accessible to clients via the REST API and are created in the microservice architecture and deployed into orchestra	ted containers.	
BIK-GIT.21	SW Development Technologies	Z	3
	d at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to	o Git, the information	
	from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use		Ĵ,
BIK-HMI	History of Mathematics and Informatics	ZK	3
	This course is presented in Czech.		-
BIK-HWB.21	Hardware Security	Z,ZK	5
	ith hardware resources used to ensure security of computer systems including embedded ones. Students become familiar with the opera		
	atures of modern processors, and storage media protection through encryption. They will gain knowledge about vulnerabilities of HW res		
-	ring with hardware during manufacture. Students will have an overview of contact and contactless smart card technology including a	-	
1.	for multi-factor authentication (biometrics). Students will understand methods of efficient implementations of ciphers.	-	
BIK-KAB.21	Cryptography and Security	Z,ZK	5
1	erstand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to	I '	
	ems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in appl		-
	actical skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic proce		

BIK-KSA	Cultural and Social Anthropology	ZK	2
	course aims to acquaint students with the basics of social and cultural anthropology as a scientific discipline dealing with the diversity		
anthropological res	search from our culture as well as from the "exotic" ones (topics: kinship, religion, social exclusion, migration, globalization, , material cult	ture, language, he	alth, history
	death, etc). The course is an interesting alternative to other humanities, taught at FIT.		T
BIK-LA1.21	Linear Algebra 1	Z,ZK	5
	students to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the field of		
	e fields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian elimina	-	-
the connection w	vith linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eigenvature and the second sec	alues and eigenv	ectors of a
	matrix. We will also demonstrate some applications of these concepts in computer science.	7 71/	
BIK-MA1.21	Mathematical Analysis 1	Z,ZK	5
-	se by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numbers. T of a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of functio		-
	bot-finding problems (iterative method of bisection and Newton's method), construction of cubic interpolation (spline), and formulation and		
	issue of finding extrema of functions). The course is closed with the Landau's asymptotic notation and methods of mathematical description		-
BIK-MA2.21	Mathematical Analysis 2	Z.ZK	6
	letes the theme of analysis of real functions of a real variable initiated in BIK-MA1 by introducing the Riemann integral. Students will le	,	-
	tution method. The next part of the course is devoted to number series, and Taylor polynomials and series. We apply Taylor's theorem to the	-	
functions with a pre	escribed accuracy. Then we study the linear recurrence equations with constant coefficients, the complexity of recursive algorithms, and	d its analysis usin	g the Maste
theorem. Finally,	we introduce the student to the theory of multivariate functions. After establishing basic concepts of partial derivative, gradient, and He	lessian matrix, we	study the
-	of localization of local extrema of multivariate functions as well as the numerical descent method. We conclude the course with the integra		
This course	e can be enrolled only after successful completion of the course BIK-MA1, which can be replaced by the course BIK-ZMA in the case	of repetitive stude	ents.
BIK-OOP	Object-Oriented Programming	Z,ZK	4
-	ented in Czech. Object-oriented programming has been used in the last 50 years to solve computational problems by using graphs of ob	-	-
by message passin	ng. In this course we look at some of the main principles of object-oriented programming and design. The emphasis is on practical techniq	ques for software of	developmer
<b>B</b>	including testing, error handing, refactoring and design patterns.		
BIK-OSY.21	Operating Systems	Z,ZK	5
	s a follow-up of the Unix-like operating systems course students deepen their knowledge in areas of OS kernels, process and thread impl		
critical regions, thre	ead scheduling, shared resource allocation and deadlocks, management of virtual memory and data storages, file systems, OS monite		ble to desig
	and implement simple multithreaded applications. General principles are illustrated on operating systems Solaris, Linux, or MS Win		-
BIK-PA1.21	Programming and Algorithmics 1	Z,ZK	7
	ability to formulate algorithms for solving basic problems and write them in the C language. They understand data types (simple, struct ions, concept of recursion. They learn to analyse simple cases of algorithm complexity. They know fundamental algorithms for searching and the se		
statements, runcti	with linked lists.	ig, solung, and n	lanipulating
BIK-PA2.21	Programming and Algorithmics 2	Z,ZK	7

the teacher. The course is intended primarily for those students who have chosen the topic of their bachelor's thesis or will choose it within the first 14 days of teaching. Within the exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed.

	exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed.				
BIK-TUR.21	User Interface Design	Z,ZK	5		
Students gain a ba	asic overview of methods for designing and testing common user interfaces. They get experience to solve the problems where softwa	ire and other produ	ucts do not		
communicate with the user optimally, since the needs and characteristics of users are not taken into account during product development. Students gain an overview of methods that					
	bring users into the development process to ensure optimal interface for them.				
BIK-TZP.21	Technological Fundamentals of Computers	Z,ZK	5		
Students get acqua	inted with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how computer st	ructures look like a	at the lowest		
level. They are intro	oduced to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to redu	ce the consumptio	n; what the		
limits to the maxim	um operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a com	nputer power suppl	ly looks like		
	(in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica.				
BIK-UKB.21	Introduction to Cybersecurity	Z,ZK	5		
The goal of the co	urse is to provide students with the introduction of basic concepts in modern approach to cybersecurity. Students will get a basic over	view of threats in o	cyberspace		
	and attacker techniques, security mechanisms in networks, operating systems and applications, as well as of basic cyberspace reg	julations.			
BIK-UOS.21	Unix-like Operating Systems	KZ	5		
Unix-like operating	systems represent a large family mostly open-source codes that kept bringing during the history of computers efficient innovative fun	nctions of multiuse	r operating		
systems for comp	uters and their networks and clusters. The most popular OS today, Android, has a unix kernel. Students get overview of basic propert	ies of this OS fami	ly, such as		
processes and thre	ads, access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the level o	f advanced users	who are not		
only able	to utilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting int	terface, called shel	Ι.		
BIK-ZSB.21	Basics of System Security	Z,ZK	5		
The goal of the co	urse is to provide introduction to basic concepts in security of computer systems. Further, the course introduces the basics of forensi	c analysis and rela	ated topics		
such as malware a	analysis or incident response. After finishing the course student will get both theoretical and practical knowledge in the area of moder	n operating system	ns security,		
	as well as skills needed for independent work in the area of operating system security incident analysis.				
BIK-ZWU	Introduction to Web and User Interfaces	Z,ZK	4		
	This course is presented in Czech.
