Recomended pass through the study plan

Name of the pass: Bachelor branch Web and Software Engineering, spec. Computer Graphics, in Czech, 2015-2020

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor branch Web and Software Engineering, spec. Computer Graphics, in Czech, 2015-2020

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatics, valid until 2024

Type of study: Bachelor full-time

Note on the pass: P edm t EMP je ekvivalentní staršímu p edm tu EPD. Platí obousm rná zastupitelnost. Oba p edm ty lze zapsat dohromady nejvýše dvakrát.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role

Britenie	This course is presented in Czech.		
BI-ACM4	Programming Practices 4	KZ	5
	This course is presented in Czech.		5
BI-AG1		Z,ZK	6
	Algorithms and Graphs 1 basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every com	,	-
	from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evalu		
	The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular	•	
BI-ALO			4
DI-ALU	Algebra and Logic The course extends and deepens the study of topics touched upon in the basic course in logic.	Z,ZK	4
		1/7	4
BI-AND.21	Programming for the Android Operating System	KZ	4
	This course is presented in Czech.	714	
BI-ANG	English Language, Internal Certificate	ZK	2
	Course information and teaching materials can be found at https://moodle-vyuka.cvut.cz/course/search.php?sear		
BI-ANG1	English Language Examination without Preparatory Courses	Z,ZK	2
BI-APJ	Aplication Programming in Java	Z,ZK	4
	This course is presented in Czech. Advanced technologies in Java.		
BI-ARD	Interactive applications on Arduino	KZ	4
	r students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simpl		-
-	ripherals with help of available libraries. The goal of the subject is to show varied software approaches to control em		
not only on display of a	PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and	therefore is suitable even fo	r Web and
	Software Engineering students.		
BI-AVI.21	Algorithms visually	Z,ZK	4
	other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the co	•	
knowledge presented in BI	AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision)	sion.org <http: td="" www.algovi<=""><td>sion.org></td></http:>	sion.org>
	that make understanding the principles of algorithms easy.		
BI-BAP	Bachelor Thesis	Z	14
BI-BEZ	Security	Z,ZK	6
	nathematical fundamentals of cryptography and have an overview of current cryptographic algorithms and applications: sy		
and hash functions. They	also learn the fundamentals of secure programming and IT security, the fundamentals of designing and using moder	,, , , , ,	ter systems
	They are able to use properly and securely cryptographic primitives and systems that are based on these prin		
BI-BLE	Blender	Z,ZK	4
	wledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended f		-
animation. It offers a	complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programn	ning graphics applications) of	course.
BI-BPR	Bachelor project	Z	2
BI-CAO	Digital and Analog Circuits	Z,ZK	5
		· · · · ·	1
	nental understanding of technologies underlying electronic digital systems. They understand the basic theoretical mo	odels and principles of funct	ionality of
Students get the funda	nental understanding of technologies underlying electronic digital systems. They understand the basic theoretical mo and conductors. They are able to design simple circuits and evaluate circuit parameters. They understand the differe		-

BI-CCN	Compiler Construction	Z,ZK	5
	uctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles and the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching		
BI-CS1	Programming in C#	KZ	4
-	urse is to introduce .NET Framework as a multi-language development platform. Then, programming language C#, its fundamental co		
	s, loops, definitions and calls of functions will be discussed. Attention is focused on the object oriented programming in C# - class def ods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debugging		.
	well as work with files are emphasized.		003311g, 03
BI-CS2	C# language and data access	KZ	4
	and data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Micros		
	is used to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current techn rving and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQL (L	•	
). Another objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational data u		
	f the course introduces Code First, Database First, Model First approaches. The students will also get to know the Conceptual Model (XML description).		-
BI-CS3	Language C# - design of web applications	KZ	4
The students will be	e introduced to current technologies in web application development on the .NET platform. They will acquire a comprehensive overview of	of the development	possibilities
BI-DAN	on thisplatform. They will learn to create WebAPI and to use it by client programs. Taxes for non-Economists	Z,ZK	4
	iaxes for fron-contributions, are obligatory payments paid by people or institutions to public budgets. This is the way how a significant p		
	ns who pays which taxes or who bears the tax burden. The course introduces students to the tax theory and policy fundamentals and		
of income, consun	nption, and wealth. The course provides practical information on calculations of tax liabilities of both citizens and institutions as well a	s information abou	t important
	taxpayers' formal duties towards public administration.	7 71/	-
BI-DBS Students are intr	Database Systems oduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They lear	Z,ZK	6
	constraints) using a conceptual model and implement them in a relational database engine. They get a hands-on experience with the	-	
	lation - the relational database model. They learn the principles of normalizing a relational database schema. They understand the funda		
	lling parallel user access to a single data source, as well as recovering a database engine from a failure. They are briefly introduced t		-
in relational databa	ases with respect to speed of access to large quantities of data. This introductory-level course does not cover: Administration of datat optimizing database applications, distributed database systems, data stores.	base systems, deb	ugging and
BI-DPR	Document., Presentation, Rhetorics	KZ	4
	d to the professional communication and writing of the scientific texts (bachelor's and diploma thesis). Students will learn to create and pr		
-	and presenting before an audience. Students will also learn to write technical reports and scientific texts.		
BI-EHD	Introduction to European Economic History This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	Z,ZK	3
BI-EJA	Enterprise Java	Z,ZK	4
The course is on a	dvanced technologies in the Java programming language. The focus is on technologies for development of enterprise information system	stems which are co	onnected to
	a database and are accessed through the web interface.	1/7	4
BI-EMP This course is air	Economics and Management Principles ned to fundamental problems of business economy. The course makes students familiar with a life cycle of business, specifically with	KZ fields: enterprise fo	4 pundation
	nto state economic environment (CR), management of property and capital structure, business transaction records keeping during an between business production and costs, evaluation of enterprise financial health and business rehabilitation or termination	n accounting perio	
BI-EP1	Effective programming 1 The course is taught in Czech.	Z	4
BI-EP2	Efficient Programming 2	KZ	4
Continuation of Ef	ficient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various ways of solving individual	dual problems are	discussed,
	with the aim to choose the best one and avoid implementation errors.	7 71/	-
BI-FMU	Financial and Management Accounting rse is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in the pa	Z,ZK	5 operations
	unts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal modificatio	-	
of economic oper	rations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of manager	ment accounting a	re base of
	Business Inteligence moduls in Business information systems.	7 71/	
BI-FTR.1	Financial Markets This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	Z,ZK	5
BI-GIT	Version control system GIT	KZ	2
	troduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and pract		
	mplementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git s		
BI-HAM	HW accelerated network traffic monitoring	KZ	4
	duces students to modern and widely used technologies and principles in the area of network infrastructure and traffic monitoring. Th mandatory skills to network operators (planning and development of resources and infrastructure) and security analysts alike (as a s	-	-
	oals of the course are to acquaint students with the modern trends and cornerstone principles in the area of monitoring network traffi		
	level and to develop their practical abilities in this field.		
BI-HMI	History of Mathematics and Informatics This course is presented in Czech.	Z,ZK	3
BI-IOS	Fundamentals of iOS Application Development for iPhone and iPad This course is presented in Czech.	KZ	4
BI-KOT	Programing in Kotlin	Z,ZK	4
	n, statically-styled object-functional language that exploits the extensive Java language ecosystem while delivering a number of advar		
The language is fu	Illy Java compliant and allows for mixed projects that preserve existing parts written in Java, and continue with the development of a r with minimum of boiler plate code Last but not least. Kotlin is suitable for designing of DSLs (Domain Specific Languages)	-	ctional way
	with minimum of boiler-plate code. Last but not least, Kotlin is suitable for designing of DSLs (Domain-Specific Languages)	•	

BI-KSA			1
	Cultural and Social Anthropology	ZK	2
	course aims to acquaint students with the basics of social and cultural anthropology as a scientific discipline dealing with the diversity	•	•
anthropological res	earch from our "exotic" cultures (topics: kinship, religion, social exclusion, migration, globalization, , material culture, language, health	i, history, death, et	tc) will be
	shown. The course is presented in Czech.		
BI-LIN	Linear Algebra	Z,ZK	7
-	nt in Czech. Students understand the theoretical foundation of algebra and mathematical principles of linear models of systems aroun		-
	s are only linear. They know the basic methods for operating with matrices and linear spaces. They are able to perform matrix operatio		
equations. The	ey can apply these mathematical principles to solving problems in 2D or 3D analytic geometry. They understand the error-detecting ar	nd error-correcting	codes.
BI-MEK	Macroeconomic Context of Domestic and World Economy	Z,ZK	4
	This course is presented in Czech.		
BI-MGA	Multimedia and Graphics Applications	Z,ZK	5
Students get acq	uainted with multimedia technologies and applications for 2D/3D bitmap and vector graphics. During the course, current tools for worl	king with images,	videos, 3D
graphics and anima	tion will be introduced. Students learn several basic techniques of creation and editing content in computer graphics, introduction to gra	phic formats, and c	compression
technologies. They	/ learn to use multimedia transmission and representation systems, including real-time multimedia processing. They understand the p	principle of operation	on and use
c	of graphics processing cards. They gain a number of practical skills, such as vectorizing raster images, retouching photos, or creating	3D models.	
BI-MIK	Fundamentals of Microeconomics	Z,ZK	4
	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	,	I
BI-MIT	Mikrotik technologies	KZ	3
	on of the subject stands in the introduction of the RouterOS operating system and some network Mikrotik technologies which are com		-
	vice providers (ISPs). The students learn how to use and create the architectures of the network solutions which are based on the me		
	trate and practically deploy them. The successful completion of this subject requires the previous knowledge of elementary computer ne	-	
	and technologies of the data-link, network and transport layer of the OSI model.	curente concepte in	
BI-MLO		7 7K	5
DI-IVILO	Mathematical Logic	Z,ZK	5
	The course seminary is taught in Czech.	1/7	
BI-MMP	Multimedia team project	KZ	4
	This course is presented in Czech.		
BI-MPP.21	Methods of interfacing peripheral devices	Z,ZK	5
The course is focus	ed on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Universa	I serial bus (USB).	. The course
includes both PC s	ide and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of USE	devices, Linux ar	nd Windows
	drivers, simple application development, and APIs of selected devices.		
BI-MVT.21	Modern Visualisation Technologies	Z,ZK	5
The goal of the co	urse is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual and augur	ented reality, visua	alization on
high resolution disp	lays (e.g., SAGE and video mapping) and their applications in practice. Several lectures deal with the content creation for the mentione	d technologies, na	amely fractal
	and procedural visualization, scientific data visualization, and 3D model scanning.		
BI-OPT	Introduction to Optical Networks	Z,ZK	4
Students get basic	overview of optical networking technology with the emphasis on practical utilization in Internet and in network infrastructures, on poss	ible problems with	deployment
of optical network	technology and on their solutions. The course will include the history of optical communications, an overview of passive components	(optical fibres, mu	ultiplexors,
dispersion compen	sators, and others), and an overview of active components (optical switches and amplifiers, high-speed coherent transmission syster	ns). The course wi	ill also cover
the most up-to-date	e topics presented at premium research conferences, such as ECOC or OFC. Attention will also be paid to new applications, such as	the accurate time	on Internet,
ultrastable freque	ncy transfer, or sensor networks. The labs will focus on real work with optical components and on measurement of their parameters.	Students will solve	e real tasks
	from practice.		
BI-OSY	Operating Systems	Z,ZK	5
Students understa	and the classical theory of operating systems (OS) in addition to the knowledge gained in the module "Programming in Shell 1". They	get a solid knowle	
kernels, process	ses and threads implementations. They understand the problems of race conditions, thread scheduling, resource allocation and deadl		edge of OS
manageme	nt of virtual memory, principles and architectures of disks, RAID and file systems. They are able to design and implement simple mult	ocks, the techniqu

BI-PJV	Programming in Java	Z,ZK	4
	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		
BI-PKM	Introduction to mathematics This course is presented in Czech.	Z	4
BI-PMA	Programming in Mathematica	Z,ZK	4
Students will be wo	rking with modern technical and scientific software. Students will learn how to use different programming styles (functional programm	ning, rule-based pr	ogramming,
	etc.), how to create dynamic interactive applications and visualisations, data processing and presentations.	7 71/	4
BI-PRP	Law and business This course is presented in Czech.	Z,ZK	4
BI-PRR	Project management	KZ	4
51.50.4	This course is presented in Czech.		
BI-PS1 Students become	Programming in Shell 1 knowledgeable users of common Unix-like operating systems. They understand the fundamental principles of the operating systems	(file systems proc	5
	hts, memory management, network interfaces). They gain the knowledge of advanced users, with hands-on experience of the shell, I		
	process various text data.		1
BI-PS2	Programming in shell 2	Z,ZK	4
Students gain a g	eneral overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In additi into shell and some other particular scripting languages and will get practical experience with shell script programming.	on, they gain a dee	eper msigni
BI-PSI	Computer Networks	Z,ZK	5
	the basic common techniques, protocols, technologies, and algorithms necessary to communicate in computer networks. The topic		
2nd to 4th layer	of the ISO OSI model. They also get a basic understanding of communication media, security, and network administration. Students v network application and configure a simple network.	will be able to write	a simple
BI-PST	Probability and Statistics	Z,ZK	5
The students will le	earn the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variable	s. They will be able	
	ndom variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical inductiv		•
	nown distributional parameters from random sample characteristics. They will also be introduced to the methods of determining the st more random variables.		
BI-PYT	Python Programming	Z,ZK	4
	The course is taught in Czech.		
BI-QAP	Quantum algorithms and programming ng students hands-on experience with quantum computers and their programming. We focus on fundaments of quantum mechanics, o	KZ	5
-	porithms showing advantages and limitations of quantum computing. During tutorials students work in open-source software developr		-
on Python langua	ge. Knowledge of linear algebra at the level of BI-LA1 and BI-LA2 (or BI-LIN) is necessary. Previous completion of BI-MA2 or BI-VMM	1 and experience v	vith Python
	might be an advantage. No previous knowledge of physics is assumed.	771	0
BI-SAP Students understa	Computer Structure and Architecture and Architecture and basic digital computer units and their structures, functions, and hardware implementation: ALU, control unit, memory system, inputer and basic digital computer units and their structures.	Z,ZK	6 torage and
transfer. In the lab	s, students gain practical experience with the design and implementation of the logic of a simple processor using modern digital desi	ign tools. The subje	ect teaches
basic knowledge	e of digital computer construction principles, how a computer performs its operations, what is machine code, and what are its connect	ions to higher proc	gramming
BI-SCE1	languages. Computer Engineering Seminar I	Z	4
	mputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to		ks. Students

		_	-
BI-ST1 The subject is or	Network Technology 1 riented to providing the students basic information and practical skills from the area of digital and IP networks. The subject is acredited CCNA1 - R&S Introduction to Networks.	Z d under the Cisco	3 Netacad -
BI-ST2	Network Technology 2 This course is presented in Czech.	Z	3
		-	
BI-ST3	Network Technology 3	Z	3
	er enhance their knowledge acquired from previous BI-ST1 and BI-ST2 courses. Principles of routing and switching presented during B		
get further exten	ded in the course. Students will be able to start fine-tune protocols' settings to gain certain advantages like increased efficiency, predi	ctability, extension	h beyond a
	simple topology, security, etc.		
BI-ST4	Network Technology 4	Z	3
Students will furth	er enhance their knowledge already acquired from previous BI-ST1, BI-ST2, and BI-ST3 courses. Principles of routing and switching	presented during	BI-ST1 and
BI-ST2 courses g	ot further extended in BI-ST3. Students were able to start fine-tune protocols' settings to gain certain advantages like increased effici	ency, predictability	, extension
beyond a simple	e topology, security, etc. This module teaches students to configure and fine-tune Wide Area Networks and to experience a completely	other type of netw	work (Non
Broadcast Multipl	e Access) which radically differs from well-known Ethernet (broadcast) type of networks. Students will also manage router and switch	firmware, perform	n password
	nergency procedures. Also the security aspect is treated; students will learn possible intra- and inter-network attacks and the mitigation	-	-
	network running.		J
BI-STO	Storage and Filesystems	Z.ZK	4
	arn principles and current solutions of storage systems architecture. The module explains principles of data store, protection, and archi	, ,	-
		wing, as so as sion	age scaling,
	load balancing and high availability.	/	
BI-SVZ	Machine vision and image processing	Z,ZK	5
Camera systems	are becoming a common part of life by being universally available. Related to this phenomenon is the need to process and evaluate in	mage information.	The course
introduces student	s to different types of camera systems and a variety of methods for image and video processing. The course is focused on practical use	of camera system	ns for solving
	problems of practice that the graduates may encounter.		
BI-TDA	Test driven architecture	KZ	4
The course is for	used on practical examples of how to develop, test, and deploy software with tools like GitLab, Docker, Kubernetes, and more that a	e well known in th	e DevOps
world. This co	purse has a strong connection on courses like BI(E)-SI1 and BI(E)-SI2. The main goal of this course is to learn by examples that occu	r in the semester p	oroject.
BI-TEX	TeX and Typography	Z,ZK	4
	ented in Czech. This course gives basics of programming in TeX (plain TeX, ConTeXt, LaTeX, OpTeX, LuaTeX). Te second part of the	, ,	1 -

Continuation of the BI-ZDM	Virtual reality II	KZ	3
BI-7DM	course Virtual Reality I. The new course focuses on collaborative telepresence, spatial computing and social life of avatars. The obje	ctive is to develop	applications
BI-7DM	for computer science and gamification in various social metaverse and desktop engines.		
	Elements of Discrete Mathematics	Z,ZK	5
Students get both	a mathematical sound background, but also practical calculation skills in the area of combinatorics, value estimation and formula ap	proximation, tools	for solving
	recurrent equations, and basics of graph theory.		
BI-ZIVS	Intelligent Embedded System Fundamentals	KZ	4
Intelligent embedd	ed system fundamentals course is focused on high-level technology embedded systems integrating artificial intelligence. The aim of t	he course is to tea	ch students
modern humanoid	robot control and development of applications in a graphical development environment. Lectures provide fundamentals of motion conti	rol, sensor reading,	, application
interfaces, robot na	avigation and development tools. In labs, students program a set of basic task by using the robot simulator and real hardware to get p	practical experience	e with these
	technologies.		
BI-ZMA	Elements of Calculus	Z,ZK	6
	knowledge and understanding of the fundamentals of classical calculus so that they are able to apply mathematical way of thinking a	-	
use basic proof te	chniques. They get skills to practically handle functions of one variable in solving the problems in informatics. They understand the lin		egrals and
	sums of sequences. They are able to estimate lower or upper bounds of values of real functions and to handle simple asymptotic ex		
BI-ZNF	PHP Framework Nette - basics	KZ	3
Students will gain t	he basics of PHP framework Nette. They will learn how to practically work with MVP architecture and various libraries of this Czech po	pular framework. T	he resulting
	knowledge should serve for the efficient creation of a web backend in PHP language.		
BI-ZPI	Process engineering	KZ	4
	fundamentals of process engineering in this subject. Students will get necessary foundations for understanding formal principles of p	-	-
	used notations (UML, BPMN, BORM). The focus in this subject lies in training of practical skills of formalisation and modelling of busi		-
CASE tools. The ro	le of process engineering for information systems development is discussed as well as its importance in the overall context of inform	ation and business	s strategy of
.	an enterprise.		
BI-ZRS	Basics of System Control	Z,ZK	4
-	an introduction to the field of automatic control. Students will gain knowledge in this rapidly evolving field of great future. We will focus		-
-	ring and physical systems. We will provide basic information from the feedback control of linear dynamical SISO systems, description	-	
	ic systems analysis and design verification, simple PID feedback, PSD, and fuzzy controllers. Students will learn the methods of creat		
,	linear dynamic systems analysis and design verification and simple PID feedback, PSD, and fuzzy controllers. Attention is also given		
control loops, issu	es of stability in control systems, single and continuous adjustment of the controller parameters, and certain aspects of the industrial	implementation of	continuous
DI 7040	and digital controllers and PLC control.		40

FI-HTE	History of Technology and Economics	ZK	2
The course introdu	ces the scientific disciplines of history and technology, economic and social history of the Czech lands and Czechoslovakia in compared	arison with the de	velopment of
	the European region 19 to 21 century .		1
FI-KSA	Cultural and Social Anthropology	ZK	2
	course aims to acquaint students with the basics of social and cultural anthropology as a scientific discipline dealing with the diversity		
anthropological res	search from our "exotic" cultures (topics: kinship, religion, social exclusion, migration, globalization, , material culture, language, healt shown. The course is an interesting alternative to other humanities, taught at FIT.	n, history, death, e	etc) will be
FI-MPL		ZK	2
	Managerial Psychology		
FI-ULI	Introduction to Linguistics for Computer This course is presented in Czech.	ZK	2
FI-VEZ	economic-managerial course from a study abroad	7	4
	ject that has been studied abroad" is covered by the Humanities subject from a study abroad in Compulsory Humanities Module that	—	1 -
	The substitution is approved by the Vice-Dean for study affairs on behalf of the Dean at the request of the student.		ournoulum.
NI-AFP	Applied Functional Programming	KZ	5
	sented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional p		
	and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, master		-
	necessary competence of a software engineer: the theory and especially the practice.		
NI-DDM	Distributed Data Mining	KZ	4
Course focuses on	state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands of	on experience with	h large scale
data processing fra	amework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations a	nd will be capable	e to propose
	approaches to parallelize other algorithms. The course is prezented in czech language.		T .
NI-DSP	Database Systems in Practes	Z,ZK	4
	This course is presented in Czech.		
NI-DZO	Digital Image Processing	Z,ZK	4
	ents a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical alg		-
	e an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background that is als processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, HDR		
	abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray conv		-
	gid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, ac		
NI-IAM	Internet and Multimedia	Z,ZK	4
The NI-IAM cours	se is focused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes acq	uisition of AV sigr	hals (input),
1.	signals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical u		
	nissions. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the effe		-
the quality and late	ncy of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording the	e scene up to the	presentation
	for audience.

NI-TSP	Testing and Reliability	Z,ZK	5
Students will gain I	nowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to pre	pare a test set with	the help of
the intuitive path se	ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bu	ilt-in-self-test equip	oment. They
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.		
NI-VCC	Virtualization and Cloud Computing	Z,ZK	5
Students will gai	n knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and	organizations. The	ey will get
acquainted with vi	rtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to effici-	ently operate and o	ptimize the
	rameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effect		
management of cor	mplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills i	n the use of moderr	n integration
	and development tools (Continuous integration and development).		
NI-VYC	Computability	Z,ZK	4
	Classical theory of recursive functions and effective computability.
