## Recomended pass through the study plan

## Name of the pass: Bachelor branch Computer Science, in English, 2015-2020

Faculty/Institute/Others: Department: Pass through the study plan: Bachelor branch Computer Science, in English, 2015-2020 Branch of study guranteed by the department: Welcome page Guarantor of the study branch: Program of study: Informatics, valid until 2024 Type of study: Bachelor full-time Note on the pass: Compulsory subjects of neighboring specializations can be enrolled as optional ones.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of s	emester: 1					
Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
BIE-CAO	Digital and Analog Circuits	Z,ZK	5	2P+2C	Z	PP

## List of courses of this pass:

Code	Name of the course	Completion	Credits				
BE0B16FI1	Philosophy 1	KZ	4				
We deal with the	e most important persons, schools and ideas of ancient philosophy. We are concerned especially on transdisciplinary nature of philos	ophy and connecti	on of old				
philosophical thoughts with recent problems of science, technology, economics and politics.							
BI-SCE1	Computer Engineering Seminar I	Z	4				
The Seminar of Co	nputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to	failures and attac	ks. Students				
	dividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the	,					
articles and other p	rofessional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teacher	rs. The topics are r	ew for each				
	semester.						
BIE-3DT.1	3D Printing	KZ	4				
Students learn to o	lesign three-dimensional objects optimized for printing on a RepRap printer and the printing itself. They will be able to design objects	, prepare for printir	ig and print				
	in 3D.						
BIE-AAG	Automata and Grammars	Z,ZK	6				
Students are introd	uced to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of finite	automata, regular	expressions				
and regular gramm	ars, translation finite automata, construction and use of pushdown automata, hierarchy of formal languages, relationships between for	rmal languages an	d automata.				
Knowledge acquir	ed through the module is applicable in designs of algorithms for searching in text, data compression, simple parsing and translation,	and design of digi	al circuits.				
BIE-AG1	Algorithms and Graphs 1	Z,ZK	6				
The course covers	s the basics from the efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computi	ng curriculum. It is	interlinked				
with the concurrent	BIE-AAG and BIE-ZDM courses in which the students gain the basic skills and knowledge needed for time and space complexity of	algorithms and lea	rn to handle				
	practically the asymptotic mathematics.						
BIE-AG2	Algorithms and Graphs 2	Z,ZK	5				
BIE-APS.1	Architectures of Computer Systems	Z,ZK	5				
Students will lear	n the construction principles of internal architecture of computers with universal processors at the level of machine instructions. Spec	; cial emphasis is giv	en on the				
pipelined instruction	n processing and on the memory hierarchy. Students will understand the basic concepts of RISC and CISC architectures and the princ	ciples of instruction	processing				
not only in scalar pr	ocessors, but also in superscalar processors that can execute multiple instructions in one cycle, while ensuring the correctness of the	sequential model of	of programs.				
The course further	elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory coherence and	consistency in su	ch systems.				
BIE-BAP	Bachelor Thesis	Z	14				
BIE-BEZ	Security	Z,ZK	6				
Students understan	d the mathematical fundamentals of cryptography and have an overview of current cryptographic algorithms and applications: symmetric a	and asymmetric cry	ptosystems,				
and hash functions	. They also learn the fundamentals of secure programming and IT security, the fundamentals of designing and using modern cryptos	ystems for comput	er systems.				
They are able to p	roperly and securely use cryptographic primitives and systems that are based on these primitives. Students are introduced to legal a	spects of informati	on security,				
	security standards, social engineering, and basic principles of security management.						

BIE-BPR	Bachelor Project	Z	2
At the beginning of	of the semester the student will contact the supervisor of the bachelor thesis he has booked. They will discuss the partial tasks that si semester. If he fulfill these tasks, the supervisor will award him / her at the end of the semester with the BI-BPR course.	tudent will perform	during the
BIE-CAO	Digital and Analog Circuits	Z,ZK	5
	fundamental understanding of technologies underlying electronic digital systems. They understand the basic theoretical models and		
transistors, gates, o	circuits, and conductors. They are able to design simple circuits and evaluate circuit parameters. They understand the differences betw	ween analog and d	igital modes
	of electronic devices.	7 71/	-
BIE-CCN	Compiler Construction uctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles	Z,ZK	5
	and the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching		
BIE-CZ0	Czech Language for Foreigners	KZ	2
	Course Czech for foreigners offers the basic topics of conversation: Introductions, Orientation, Shopping, Work / Study, Travel, Time	e, Family.	
BIE-CZ1.21	Czech Language for Foreigners II	KZ	2
	nded for Students of English programmes who have completed BIE-CZ0 course or have basic knowledge of the Czech language. Th c vocabulary and clarifies the structure of the Czech language structure with regard to the practical needs of Students residing in the		xpands the
BIE-DBS	Database Systems	Z,ZK	6
	oduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They lear		
	constraints) using a conceptual model and implement them in a relational database engine. They get a hands-on experience with the		
	lation - the relational database model. They learn the principles of normalizing a relational database schema. They understand the funda Iling parallel user access to a single data source, as well as recovering a database engine from a failure. They are briefly introduced t	•	
	ases with respect to speed of access to large quantities of data. This introductory-level module does not cover: Administration of data		U U
	optimizing database applications, distributed database systems, data stores.	-	
BIE-DPR	Document., Presentation, Rhetorics	KZ	4
	ed to the professional communication and writing of the scientific texts (bachelor's and diploma thesis). Students will learn to create and proper an audience. Students will also learn to write technical reports and scientific texts. There is no fixed schedule for BIE-DPR. A teac		
and presenting bei	start of the semester.	cher will contact yo	
BIE-EHD	Introduction to European Economic History	Z,ZK	3
	uces a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global eco		-
	in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic	, ,	
	pire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial instituti tailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and c	-	
	meetings will consist of a mixture of lecture and discussion.	5	,
BIE-EMP	Economic and management principles	KZ	4
	ned to fundamental problems of business economy. The course makes students familiar with a life cycle of business, specifically with		
	nto state economic environment (CR), management of property and capital structure, business transaction records keeping during a between business production and costs, evaluation of enterprise financial health and business rehabilitation or terminatior		u, a relation
	between business production and costs, evaluation of enterprise intancial nearth and business renabilitation of termination	1.

		T	
BIE-PA1	Programming and Algorithmics 1	Z,ZK	6
Students learn to c	onstruct algorithms for solving basic problems and write them in the C language. They understand data types (simple, structured, poin	ters), expressions,	statements.
	t of recursion. They learn the basics of algorithm complexity analysis. They know fundamental algorithms for searching, sorting, and	,	
-			1
BIE-PA2	Programming and Algorithmics 2	Z,ZK	7
Students know th	e instruments of object-oriented programming and are able to use them for specifying and implementing abstract data types (stack, d	queue, enlargeable	array, set,
table). They can im	plement linked structures. They learn these skills using the programming language C++. Although this is not a module of programming i	n C++, students are	e introduced
	to all C++ features needed to achieve the main objective (e.g., operator overloading, templates).	,	
			•
BIE-PAI	Law and Informatics	ZK	3
Students have know	wledge of fundamental protection of intangible property, overview of contractual aspects of copyright. They are able to design an appro	priate contract-base	ed copyright
protection and do	research and verification of the outputs concerning trademarks, patents, industrial design rights. They are able to participate actively	in the proceedings	to register
	intangible property. They have a good overview of the Czech Republic legislation as well as the EU legislation.	3	J
			_
BIE-PJP	Programming Languages and Compilers	Z,ZK	5
Students master ba	asic methods of implementation of common high-level programming languages. They get experience with the design and implemental	ion of individual co	mpiler parts
for a simple progra	amming language: data types, subroutines, and data abstractions. Students are able to formally specify a translation of a text that has	s a certain svntax ir	nto a target
	ompiler based on such a specification. The notion of compiler in this context is not limited to compilers of programming languages, bu		•
			er programs
	for parsing and processing text in a language defined by a LL(1) grammar.		
BIE-PJV	Programming in Java	Z,ZK	4
The course Progra	mming in Java will introduce students to the object oriented programming in Java programming language. Beside of basics of Java la	anguage the fundar	nental APIs
	will also be presented, especially data structures, files, GUI, networking, databases and concurrent APIs.		
BIE-PKM	Preparatory Mathematics	Z	4
	The purpose of Preparatory Mathematics is to help students revise the most important topics of high-school mathematics	i.	
BIE-PPA	Programming Paradigms	Z,ZK	5
BIE-PRR.21	Project management	Z,ZK	5
The aim of the co	urse is to introduce students into the basic concepts and principles of project management, i.e. methods of planning, teamwork, ana	lysis, crisis manaq	ement in a
	cation, argumentation and meeting management. Students will practice project management techniques (e.g. SWOT analysis, risk as		
	ource schedule, resource balancing, network graphs) and creation of project documentation. The course is designed especially for st		
deepening their k	nowledge outside IT, consider starting their own company, or have ambitions to work in middle or senior management positions in la	rge companies. The	e course is
	also suitable for all those who will develop software or hardware in the form of team projects.		
BIE-PS1	Programming in Shell 1	KZ	5
		1 1	-
Students understar	nd the basic principles of operating systems (processes and threads, file systems, access rights, memory management, network inter		
	operating systems. In practically oriented exercises, they will learn to use shell, basic commands and filters for processing text	data.	
BIE-PS2	Programming in shell 2	Z,ZK	4
-	ieral overview of scripting languages, introduction into syntax, semantics, programming style, data structures, pros and cons. In addit	1 ' 1	ener insight
	shell and some other particular scripting languages and will get practical experience with shell script programming. Note to Erasmus st		
the lectures to pro	vide even very basic Bourne shell usage. Depending on actual knowledge of the students, orientation in user filesystem tools (cp, In,	, mkdir, rm) and u	iseful basic
data filtering tool	s (cut, tr, sort, uniq) can be provided. The advantage of this module is that we do not stop at this point - we will show you also a sel	lection of advanced	l scripting
	techniques used in practice.		
BIE-PSI	Computer Networks	Z,ZK	5
	Computer Networks	· · ·	_
Students understa	ind the basic common techniques, protocols, technologies, and algorithms necessary to communicate in computer networks focusing	j primarily the 2nd	to 4th layer
of the ISO OSI mo	del. They also get a basic understanding of communication media, security, and network administration. Students will be able to write	e a simple network	application
	and configure a simple network.		
BIE-PST	Probability and Statistics	Z,ZK	F
-			5
The students will le	arn the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variable	es. They will be able	e to to apply
basic models of ra	ndom variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical inducti	on they will be able	to perform
estimations of unki	nown distributional parameters from random sample characteristics. They will also be introduced to the methods of determining the s	tatistical dependen	ce of two or
	more random variables.		
			-
BIE-SAP	Computer Structures and Architectures	Z,ZK	6
Students understa	nd basic digital computer units and their structures, functions, and hardware implementation: ALU, control unit, memory system, inp	uts, outputs, data s	torage and
	. In the labs, students gain practical experience with the design and implementation of the logic of a simple processor using modern	-	-
BIE-SCE1	Computer Engineering Seminar I	Z	4
The Seminar of Co	mputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to	o failures and attack	ks. Students
are approached in	dividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the	subject is work wi	th scientific
articles and other r	professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teache	rs. The topics are r	ew for each
	semester.

	professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teache		
	semester.		
BIE-SEP	World Economy and Business	Z,ZK	4
The course introd	uces students of technical university to the international business. It does that predominantly by comparing individual countries and k	key regions of world	d economy.
Students get to	know about different religions and cultures, necessary for doing business in diverse societies as well as indexes of economic freedor	m, corruption and e	conomic
-	h are needed for the right investment decision. Seminars help to improve on the knowledge in the form of discussions based on indiv	-	
	take bachelor level of this course BIE-SEP as a prerequisite.	<u> </u>	-
BIE-SI1.2	Software Engineering I	Z,ZK	5
Students learn the	methods of analysis and design of large software systems, which are typically designed and implemented in teams. Students will ge	et acquainted with	CASE tools
	leling language UML for modeling and solving software-related problems. Students will get an overview of object-oriented analysis, d	-	
-	sting processes. The knowledge obtained in the lectures is practiced on a team project. If enrolled for the BIE-SP1 course running in pa	-	
	work on a single more complex project and they are classified to both courses for a single project. This course does not teach the stu		g, nor any
l partici	Ilar technology, framework or programming language. The students are required to have some knowledge of these to apply them on	their team project.	

BIE-ST1	Network Technology 1	Z	3
The course is for	cused on essentials of computer networks and practice with network technologies. The course corresponds to the Cisco Netacad cur	riculum, CCNA1 - I	R&S
	Introduction to Networks.		
BIE-VAK.21	Selected Combinatorics Applications	Z	3
The course aims to	introduce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to the ba	asic courses, we a	pproach the
	ions to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some basic		
	ticipation of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical) info		
will select probler	ns to be solved will include, for example, graph theory, combinatorial and algorithmic game theory, approximation algorithms, optimize	ation and more. Stu	udents will
	also try to implement solutions to the studied problems with a special focus on the effective use of existing tools.		
BIE-VZD	Data Mining	Z,ZK	4
	uced to the basic methods of discovering knowledge in data. In particular, they learn the basic techniques of data preprocessing, multi		
	es of data transformation, and fundamental principles of knowledge discovery methods. Students will be aware of the relationships betw		
and know the fur	ndamentals of assessing model quality. Data mining software is extensively used in the module. Students will be able to apply basic d	ata mining tools to	common
	problems (classification, regression, clustering).	r	
BIE-ZDM	Elements of Discrete Mathematics	Z,ZK	5
Students get both a	a mathematical sound background, but also practical calculation skills in the area of combinatorics, value estimation and formula appro	oximation, and tool	s for solving
	recurrent equations.		
BIE-ZMA	Elements of Calculus	Z,ZK	6
	knowledge and understanding of the fundamentals of classical calculus so that they are able to apply mathematical way of thinking a		
use basic proof te	chniques. They get skills to practically handle functions of one variable in solving the problems in informatics. They understand the lin		egrals and
	sums of sequences. They are able to estimate lower or upper bounds of values of real functions and to handle simple asymptotic ex		
BIE-ZRS	Basics of Systems Control	Z,ZK	4
	basics of System Control is designed for anyone interested in applied computer science in bachelor studies. A brief introduction to the		
	lated by our graduates in the industrial practice. Students will gain knowledge in this rapidly evolving field of great future. We will focus		
	ring and physical systems. We will provide basic information from the feedback control of linear dynamical SISO systems. We will tead		
	sic linear dynamic systems analysis and design verification, simple PID feedback, PSD and fuzzy controllers. This is a survey course i		
	g a description of the system model, the basic linear dynamic systems analysis and design verification and simple PID feedback, PSD	•	
	nsors and actuators in control loops, issues of stability in control systems, single and continuous adjustment of the controller paramet		
	nentation of continuous and digital controllers and PLC control. The themes of lectures are accompanied by a number of useful exam implementations.	pies and practical	inuusinai
BIE-ZUM		Z.ZK	4
	Artificial Intelligence Fundamentals uced to the fundamental problems in the Artificial Intelligence, and the basic methods for their solving. It focuses mainly on the classic	I ' I	-
	i-agent systems, game theory, planning, and machine learning. Modern soft-computing methods, including the evolutionary algorithm		
space search, muit	be presented as well.	S and the neural ne	elworks, will
