Recomended pass through the study plan

Name of the pass: Branch Internet of Things - Passage through study

Faculty/Institute/Others: Faculty of Electrical Engineering Department: Pass through the study plan: Open Informatics - Internet of Things 2016 Branch of study guranteed by the department: Welcome page Guarantor of the study branch: Program of study: Open Informatics Type of study: Bachelor full-time Note on the pass:

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

List of courses of this pass:

Code	Name of the course	Completion	Credits
B0B01LAG	Linear Algebra	Z,ZK	8
The course covers t	the initial parts of linear algebra. Firstly, the basic notions of a linear space and linear mappings are covered (linear dependence and indep	pendence, basis,	coordinates
etc). The calculus c	of matrices (determinants, inverse matrices, matrices of a linear map, eigenvalues and eigenvectors, diagonalisation, etc) is covered n	next. The application	ons include
	solving systems of linear equations, the geometry of a 3D space (including the scalar product and the vector product) and SV		
B0B01LGR	Logic anad Graphs	Z,ZK	5
This course covers	basics of mathematical logic and graph theory. Syntax and semantics of propositional and predicate logic are introduced. The importance	e of the notion of co	onsequence
	and of the relationship between a formula and its model is stressed. Further, basic notions from graph theory are introduced	ł.	
B0B01MA1	Mathematical Analysis 1	Z,ZK	7
	The aim of the course is to introduce students to basics of differential and integral calculus of functions of one variable.		
B0B01MA2	Mathematical Analysis 2	Z,ZK	7
The subject cover	's an introduction to the differential and integral calculus in several variables and basic relations between curve and surface integrals.		ns function
	series and power series with application to Taylor and Fourier series.		
B0B01PST	Probability and Statistics	Z,ZK	7
B0B33OPT	Optimization	Z,ZK	7
1	s an introduction to mathematical optimization, specifically to optimization in real vector spaces of finite dimension. The theory is illustrate		
	You will refresh and extend many topics that you know from linear algebra and calculus courses.		
B0B35APO	Computer Architectures	Z,ZK	5
B0B35LSP	Logic systems and processors	Z,ZK	6
1	ces computing resources' basic hardware structures, design, and architecture. It provides an overview of the possibilities of performing da	,	-
	g embedded processor systems with peripherals on modern FPGA programmable logic circuits, which are increasingly widely used to	-	
• •	DL, from logic to more complex sequential circuits to practical finite state machine (FSM) designs. They will also master the correct de

B4B32PKS	Computer and Communication Networks	Z,ZK	6				
The aim of the cour	se is to familiarize students with current trends in the switched local networks and the key functions of routing protocols in IP networks.	The second part of	f the course				
introduces students to concepts of ensuring the information security in the communication networks. An integral part of the course is also an explanation of the principles for ensuring							
the adequate quality of services in data networks and features of some file sharing application protocols. The course is aimed rather primarily practically then theoretically							
B4B33ALG	Algorithms	Z,ZK	6				
In the course, the a	lgorithms development is constructed with minimum dependency to programming language; nevertheless the lectures and seminars	are based on Java	. Basic data				
types a data struc	ctures, basic algorithms, recursive functions, abstract data types, stack, queues, trees, searching, sorting, special application algorith	ms, Dynamic prog	ramming.				
	Students are able to design and construct non-trivial algorithms and to evaluate their effectivity.						
B4B33RPH	Solving Problems and other Games	KZ	6				
The main motivati	on is to let students to deal with real-world problems properly. When working on real problems the student shall learn how to decomp	ose the big proble	m, how to				
define interfaces, l	how to test and validate individual steps and so on. Many problems will actually be beyond the first-year-student skills. And many pro	blem will not be so	lved in the				
optimal way. The u	insolved parts should motivate the students to study difficult theoretical subjects. They should generate the important questions. Idea	ally, at the end of th	ie subject,				
the student should	be eager to study deeper about informatics. The course also explains the basis of the object oriented design, software testing, ways	or writing readable	and robust				
	codes.						
B4B35OSY	Operating Systems	Z,ZK	4				
Lecture introduces	operation system's basic concepts and principles as processes, threads, communication and synchronization, virtual memory, drive	s, file systems, ba	sic security				
aspects. These top	ics are theoretically described and demonstrated on Linux and Windows OS with multi-core systems. Practical exercises from OS in	C programming lar	nguage will				
	be solved on labs. Students will work with Linux OS and micro-kernel NOVA.						
B4B35PSR	Real-time Systems Programming	Z,ZK	6				
The goal of this co	purse is to provide students with basic knowledge about software development for real-time systems, for example in control and embe	edded applications	. The main				
focus is on embedd	ed systems equipped with a real-time operating system (RTOS). Lectures will cover real-time systems theory, which can be used to for	mally verify timing	correctness				
	other set of lectures will introduce methods and techniques used for development of safety-critical systems, whose failure may have	•	· .				
-	nts will first solve a few simple tasks to familiarize them with basic components of VxWorks RTOS and to benchmark the used OS an						
	s represent the typical criteria for assessing the suitability of a given platform for the given application. After the simple tasks, student		x task of				
	itical motion control application which will require full utilization of RTOS features. All the tasks at the labs will be implemented in C (or C++) language.					
B4B36PDV	Parallel and Distributed Computing	Z,ZK	6				
B4B38NVS	Embedded Systems Design	Z,ZK	6				
	The course deals with design of embedded systems using ARM based microcontrollers.						
B4B38PSIA	Computer Networks	Z,ZK	5				
B4BPROJ6	Unassisted project	Z	6				
BBAP20	Bachelor thesis	Z	20				
BEZB	Safety in Electrical Engineering for a bachelor's degree	Z	0				
The purpose of the	safety course is to give the students basic knowledge of electrical equipment and installation as to avoid danger arising from operatio	n of it. This introduc	ctory course				
contains funda	mentals of Safety Electrical Engineering. In this way the students receive qualification of instructed person that enables them to worl	on electrical equi	pment.				
BEZZ	Basic health and occupational safety regulations	Z	0				
The guidelines were	e worked out based on The Training Scheme for Health and Occupational Safety designed for employees and students of the Czech	echnical University	y in Prague,				
which was provide	d by the Rector's Office of the CTU. Safety is considered one of the basic duties of all employees and students. The knowledge of He	alth and Occupation	onal Safety				
regulations forms an integral and permanent part of qualification requirements. This program is obligatory.
