## Recomended pass through the study plan

# Name of the pass: Specialization Electrical Engineering and Management - Passage through study

Faculty/Institute/Others: Faculty of Electrical Engineering Department: Pass through the study plan: Electrical Engineering, Power Engineering and Management - Electrical Engineering and Management Branch of study guranteed by the department: Welcome page Guarantor of the study branch: Program of study: Electrical Engineering, Power Engineering and Management

Type of study: Bachelor full-time

Note on the pass:

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of sen	nester: 1

## List of courses of this pass:

Code	Name of the course	Completion	Credits
A003TV	Physical Education	Z	2
B0B01DRN	Differencial Equations and Numerical Analysis	Z,ZK	4
This course introduc	es students to the classical theory of ordinary differential equations (separable and linear ODEs) and also to bsics of numerical meth	ods (errors in calc	ulations and
stability, numerical	solutions of algebraic and differential equations and their systems). The course takes advantage of the synnergy between theoretic	al and practical po	int of view.
B0B01KANA	Complex Analysis	Z,ZK	4
B0B01LAGA	Linear Algebra	Z,ZK	7
B0B01MA1A	Mathematical Analysis 1	Z,ZK	6
	This is an introductory course to differential and integral calculus of functions of one real variable.		
B0B01MA2A	Mathematical Analysis 2	Z,ZK	6
The subject covers	s an introduction to the differential and integral calculus in several variables and basic relations between curve and surface integrals	Other part contair	ns function
	series and power series with application to Taylor and Fourier series.		
B0B16ET1	Ethic 1	KZ	4
Aim of this subject is	s to provide the students an orientation not only in general problems of ethics but above all to offer instructions for solving various situ	uations of human li	fe. Essential
parts of	the subject are discussions in which students can react to lectures but also to actual questions coming with news and look for the c	ommunal answers.	
B0B16FI1	Philosophy 1	KZ	4
We deal with the	most important persons, schools and ideas of ancient philosophy. We are concerned especially on transdisciplinary nature of philos	, sophy and connecti	on of old
	philosophical thoughts with recent problems of science, technology, economics and politics.		

in this course in the study of electrical circuits, theory of electrotechnical materials or radioelectronics. Apart of this, the consecutive course Physics 2. B1B02FY2 Physics 2 is closely linked with the course Physics 1. Within the framework of this course the students with the theory of waves - will give to the students basic insight into the properties of waves and will help to the students with the computer vision, measuring technique and will allow them to understand the principles of novel techning at first a physical description of basic properties and basic types of materials for electrical engineering is carried or materials and semiconductors, which are used in power electrical engineering, are presented. The stress is put on student will meet, in higher detail, with ceramics for electrical engineering, and their apart of this and with selected nanomaterials and their apart of this and with selected nanomaterials and their apart of this and with selected nanomaterials and their apart of this and publication examples. There are presented elementary digital circuits, the represented application, B1B13SSE1 Solar Systems and Electrochemical Sources	KZ       4         KZ       4         KZ       4         ZK       2         ZK       2         ZK       2         ZK       2         ZK       2         ZK       2         Z,ZK       4         KZ       4         KZ       4         Z,ZK       5         and methods used in working with random processes, especially ne course, basic procedures of cluster analysis will be presented         Z,ZK       8         o important areas of physics. The first one is a classical mechanic rudy the particle kinematics; dynamics of the mass particle, system of mechanical systems, which they can meet during their further y as well as non-stationary. The students can use the facts gaine he knowledge gained in this course is required for the study of such modern areas as robotics, nologies and functioning of new electronic devices.         Z,ZK       4         out. Types of conductors, superconductors, insulators, magnetic or relationships between properties, technology and the use. The pplications, with environmental conductive joining, with materials rapplications.         Z,ZK       4         energetics. Students works with hardware for data acquisition an acquisition
B0B16HI1         History 1           B0B16HT1         History of science and technology 1           B0B16HTE         History of technology and economic           B0B16MPL         Psychology for managers           B0B16MPS         Psychology           B0B99PRPA         Procedural Programming           B1B01MEK         Mathematics for Economy           The aim is to introduce the basic theory of probability and statistics, familiarise students with basic terms properties.           with Markov chains, and show applications of these mathematical tools in economics and insurance. At the end of th           B1B02FY1         Physics 1           The basic course of physics at the Faculty of Electrical Engineering - Physics 1, is devoted to the introduction into two and the second one is the electric and magnetic field. Within the framework of the classical mechanics, the students should be able to solve basic problems dealing with the description studies. The classical mechanics is followed by the relativistic mechanics, electric and magnetic field - both stationary in this course in the study of electrical circuits, theory of electrotechnical materials or radioelectronics. Apart of this, the course Physics 2           B1B02FY2         Physics 2           The course Physics will complete the student's general education in physics. The knowledge gained in this course will complete the student's general education in physics. The knowledge gained in this course will complete vision, measuring technique and will allow them to understand the principles of novel techn           B1B02FY2 <th>KZ       4         KZ       4         KZ       4         ZK       2         ZK       2         Z,ZK       4         KZ       4         Z,ZK       2         Z,ZK       4         KZ       4         KZ       4         KZ       4         KZ       4         Z,ZK       5         and methods used in working with random processes, especially the course, basic procedures of cluster analysis will be presented         Z,ZK       5         and methods used in working with random processes, especially the particle kinematics; dynamics of the mass particle, system         of mechanical systems, which they can meet during their further         y as well as non-stationary. 	Z,ZK 5
The course familiarizes students with the basic principles of electrochemical sources and photovoltaic cells and syste	ms. At the beginning, the emphasis is on understanding the basi
principle using the equivalent circuits and mathematical description. In the next section, the basic types of electrochemic	
Similarly, students become familiar with the technology of photovoltaic cells and modules. Another chapter is devoted course, students become familiar with economical and technological implications of the combination	
B1B13TEP Electrical engineering technological processes	Z,ZK 4
Technologies used in electronics, laser, and other beam technologies and IC packaging will be characterized. The	, , ,
impregnation processes. The subject is also the basis for producing single-crystal Si. Technology using plasma tec	
presented.	
B1B13VEZ Manufacturing of Electronic Equipment	Z,ZK 6
(obsolete text, currently valid is czech version) Mechanical and electrical design. The electric contact. Joining of con	
boards fabrication. Soldering in electronics. Electromagnetic compatibility of electronic equipment. Protection of compa accreditation, guality control and guality assurance.	
B1B13VVZ1 Manufacturing of Power Devices	Z,ZK 4
The topic of the subject is focused on manufacturing of power electrical machines and devices from construction and	
transformers and rotating machines, namely their magnetic circuits and windings. Second half of the subject is dec	
converters including diagnostics, reliable operation. Last part of lectures deals with layouts of manufactiru	ing, lean management and planning of manufacturing.
B1B14ZEL1 Fundamentals of Electrotechnical Engineering	KZ   4
The course extends necessary knowledge of creating technical documentation, including oral and written presenta	
focused on explaining and practicing the basic parts of electrical engineering, so that the students' initial knowledge	
B1B14ZPO Fundametals of Electric Drives The course provides the basic terms and knowledge in electric drives and in the issues related to this discipline as v	Z,ZK  5
control, continuous control and also discrete control, and on the characteristics of used controllers in practice. Furthe	
are explained.	.,
B1B14ZSP Electric Machines and Apparatuses Basics	Z,ZK 5
The course explains the principles of machines for convertsion of mechanical energy to electrical and back. It discuss	
non-rotating electric machines. Following the behavior of electrical machines are discussed basic devices for protect	
B1B14ZVE Power Electronics	Z,ZK 4
The course focuses on the basic types of power semiconductor converters, which are used to change the parameter	
properties and applications of power electronic converters, their advantages, dis	
B1B15EN11 Power Engineering 1	Z,ZK 5
B1B15EN2 Power Engineering 2	Z,ZK 5
B1B15VYA Computational Applications	KZ 4
B1B16EOB Lightning protection economy	Z,ZK $ $ 5
The subject provides an introduction to lightning discharge physics and deals with protections against their effects. Stur of protections. Risk management methods for lightning damage are discussed. The course includes an excursion to the	
effects of lightning currents in the laboratory supported by numeric	

B1B16MME	Macro and Microekonomics Z,2	ZK	5
Basic economic terms	s, market, law of demand, law of supply, market equilibrium, price regulation, price and income elasticities, consumer's behavior, producer's beh	havior, co	st, revenue,
profit, market failure	, monopoly, government macroeconomic policy, gross domestic product, multipliers, money, inflation, banking system, monetary policy, labo	or market,	, business
	cycle, fiscal policy, foreign trade policy, comparative advantage, CR and EU, Euro.		
B1B16PPP	Business Law Z,2	ZK	5
B1B16UEE1	Economy of Power Industry Z,2	ZK	5
B1B16ZFM1	Basics of Financial Management Z,2	ZK	5
B1B16ZPU	Basics of Business Economics K	(Z	5
B1B17EMP	Electromagnetic Field Z,2	ZK	5
•	This course gets its students acquinted with principles and applied electromagnetic field theory basics.		
B1B31EOS	Electric circuits Z,2	ZK	6
The subject describe	es fundamental methods of electrical circuit analysis. The aim is to unify different level of knowledge of students coming from schools of diffe	erent cate	gories and
	vledge necessary for next subjects. It presents the difference among physical circuit and its models, and then it presents the behavior of basic i		
in DC circuits and in si	inusoidal steady state as well as transients, caused by changes in the circuit. Acquired knowledge should, among other things, also be used fo	or critical a	assessment
	of the results of the analysis and simulation of electrical circuits by means of software tools.
