Recomended pass through the study plan

Name of the pass: Specialization Software Engineering - Passage through study

Faculty/Institute/Others: Faculty of Electrical Engineering Department: Pass through the study plan: Open Informatics - Software Engineering Branch of study guranteed by the department: Welcome page Guarantor of the study branch: Program of study: Open Informatics Type of study: Follow-up master full-time Note on the pass:

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of seme	ester: 1

List of courses of this pass:

and distributed algorithms. Subsequently we will talk about fundamental parallel algorithms; typically, constituting cornerstones of algorithms for real-world problems. The laboratory exercise will be aimed at hardware platform commonly used in practice. B4M36BSY Introduction to Computer Security Z,ZK 6 This course aims to teach students cybersecurity fundamentals by combining penetration testing with defense strategies. Using an innovative blend of lectures and practical tutorials, students engage in highly interactive classes. Each new concept is immediately reinforced with hands-on exercises, allowing students to apply what they have learned in real-time. Throughout the semester, the course integrates both attack and defense techniques. In realistic scenarios accessed via a cyber range, students will practice a wide range of skills: reconnaissance, scanning, exploiting vulnerabilities, privilege escalation, lateral movement, exfiltration, malware analysis, network security forensics, binary reversing, log analysis, intrusion detection systems, honeypots, and applications of machine learning and AI in cybersecurity. Classes are in English. Teachers speak English, Czech, Spanish, Greek, and Bosnian.
of algorithms. Further it is dealt with the theory of complexity; the classes P, NP, NP-complete, PSPACE and NPSPACE are treated and properties of them investigated. Probabilistic algorithms are studied and the classes RP and ZZP introduced. B4M33PAL Advanced algorithms Z,ZK 6 B4M35KO Combinatorial algorithms. Application of formal languages theory in computer science - pattern matching. Z,ZK 6 The goal is to show the problems and algorithms of combinatorial optimization (often called discrete optimization; there is a strong overlap with the term operations research). Following the courses on linear algebra, graph theory, and basics of optimization of optimization is notes, ground transportation, flight transportation, logistics, planning of human resources, scheduling in production lines, message routing, scheduling in parallel computers. 6 B4M35PAG Parallel algorithms and their properties important for understanding the fundamental principles of parallel algorithms. Subsequently we will talk about fundamental parallel algorithms; typically, constituting cornerstones of algorithms for real-world problems. The laboratory exercise will be aimed at hardware platform commonly used in practice. 6 B4M36BSY Introduction to Computer Security Z,ZK 6 Introductory lectures, we will focus on general approaches to design of parallel algorithms and their properties important for understanding the fundamental principles of parallel and distributed algorithms. Subsequently we will talk about fundamental parallel algorithms and their properties important for understanding the fundamental principles of parallel and thardware platform commonly used in pra
algorithms are studied and the classes RP and ZZP introduced. B4M33PAL Advanced algorithms Z,ZK 6 Basic graph algorithms and graph representation. Combinatorial algorithms. Application of formal languages theory in computer science - pattern matching. 6 B4M35KO Combinatorial Optimization Z,ZK 6 The goal is to show the problems and algorithms of combinatorial optimization (often called discrete optimization; there is a strong overlap with the term operations research). Following the courses on linear algebra, graph theory, and basics of optimization in stores, ground transportation, flight transportation, logistics, planning of human resources, scheduling in production lines, message routing, scheduling in parallel computers. 6 B4M35PAG Parallel algorithms Z,ZK 6 In the introductory lectures, we will focus on general approaches to design of parallel algorithms. Subsequently we will tak about fundamental parallel algorithms; typically, constituting cornerstones of algorithms for real-world problems. The laboratory exercise will be aimed at hardware platform commonly used in practice. Bosnian.
B4M36DS2 Database Systems II Z,ZK 6
The aim is to introduce new trends in database systems to students. We will focus primarily on the current issues of Big Data and the associated problems of distributed storage and
processing of data. We will introduce a so-called basic types of NoSQL databases and also the related issue of cloud computing, data storage and distributed computations over large
B4M36ESW Effective Software Z,ZK 6
Within the course of Efficient software you will get familiar with the area of software and algorithm optimization under limited resources. The course is focused on the efficient usage of
topics are: code optimization, effective data structures and processor cache usage, data structures in multi-threaded applications and implementation of efficient network servers.
modern hardware architectures - multi-core and multi-processor systems with shared memory. Students will practically implmenet and use presented techniques in C and Java. Main

B4M36SWA	Software Architectures	Z,ZK	6
In this course stu	dents become familiar with the general requirements for software (SW) architecture and related quality parameters that are monitore	d by software arch	nitectures.
Individual require	ments and parameters are discussed in the context of current architectural standards and design patterns that students practically le	arn through exerci	ses. In this
	course, besides the technology perspective on software architecture is also taken into an account the management aspec	t.	
B4M36ZKS	Software Quality Assurance	Z,ZK	6
B4MSVP	Software or Research Project	KZ	6
BDIP25	Diploma Thesis	Z	25
Independent final	comprehensive work for the Master's degree study programme. A student will choose a topic from a range of topics related to his or	her branch of study	y, which wil
be specified b	by branch department or branch departments. The diploma thesis will be defended in front of the board of examiners for the compreh	ensive final exami	nation.
BEZM	Safety in Electrical Engineering for a master's degree	Z	0
The course provi	des for students of all programs periodic training guidelines for health and occupational safety and gives knowledge of electrical haz	ard of given brancl	n of study.
	Students receive indispensable qualification according to the current Directive of the Dean.		

For updated information see <u>http://bilakniha.cvut.cz/en/f3.html</u> Generated: day 2025-07-12, time 12:03.
