### Recomended pass through the study plan

### Name of the pass: Specialization Electrical Drives - Passage through study

Faculty/Institute/Others: Faculty of Electrical Engineering

Department:

Pass through the study plan: Electrical Engineering, Power Engineering and Management - Electrical Drives

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Electrical Engineering, Power Engineering and Management

Type of study: Follow-up master full-time

Note on the pass:

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

#### Number of semester: 1

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
BEZM	Safety in Electrical Engineering for a master's degree Vladimír K la, Radek Havlí ek, Ivana Nová, Josef ernohous, Pavel Mlejnek Radek Havlí ek Vladimír K la (Gar.)	Z	0	2BP+2BC	Z	Р
B1M15IAP	Engineering Applications Jan Kyncl Jan Kyncl (Gar.)	Z,ZK	5	2P+2C	Z	Р

# List of courses of this pass:

Code	Name of the course	Completion	Credits
A003TV	Physical Education	Z	2
B0M16FIL		Z,ZK	5

B0M16HSD1	History of economy and social studies	Z,ZK	5
This subject deals	with the history of the Czech society in the 19th - 21th centuries. It follows the forming of the Czech political representation, its aims a	nd achieved resu	lts as well as
	the social and cultural development and coexistence of the various ethnical groups in the Czech countries.		
B0M16HVT	History of science and technology 2	Z,ZK	5
	historical developments in electrical engineering branches in the world and in the Czech Lands. Its ultimate goal is to stimulate stude		-
traditions of the su	bject, while highlighting the developments in technical education and professional organizations, the process of shaping scientific life engineers	and the iniliaence	e or technicar
B0M16PSM	Psychology	Z,ZK	5
B0M16TEO	Theology	Z,ZK	5
	des to students the basic orientation in christian theology and requires no special previous education. After short philosophic lecture t		
	he subject is determined not only to believer students who want to know the reliable theologic grounding but also above all to ones who		
	- religion from which graws our civilization up.		
B1M13ASS	Solar Systems Application	Z,ZK	5
Solar energy. Photo	ovoltaic phenomena. Photovoltaic cells and modules and their characteristics. Photovoltaic systems and their applications. Photo-therm	nal phenomena.P	hoto-thermal
DAMAGEKE	power stations. Significance, economic and environmental aspects of solar energy exploitation.	7 71/	
B1M13EKP	Ecology and materials logy from the perspective of ecology. Environmental assessment of the various types of surface protection. Environmental aspects of	Z,ZK	5
	nmental impacts of electrical production. Ekodesign proposal of the electrical product. Principles of the proposal product for a difficult op		
	of electrical waste.	g	
B1M13JAS1	Quality and Reliability	Z.ZK	6
	definitions from the area of quality and reliability and their control, philosophy of quality, systems of quality control in the world. Reliabi	lity as a part of q	uality. Basic
definitions from th	e area of reliability, basic distributions used in reliability and their basic characteristics. Back-up using a warm and cold standby, types	of warm and co	ld standbys.
	onents and systems, calculation of reliability using composition and decomposition. and using a method of a list. Basic statistical method	•	
	nagerial tools for quality control. Techniques FMEA and QFFD, house of quality. Capability of a process. Taguchi loss function. Audits.		
B1M13VSE	Power components in electrical engineering	Z,ZK	5
Power semicono	ductor device (diodes, BJTs, thyristors, MOSFETs and IGBTs) and integraed structures (modules). Structures, function, characteristic components of powet electronic. Connection of devices in parallel and in series.	s and parameter	s, Passive
B1M14DEP	Digital Control of Electric Drives	Z.ZK	5
	Digital Control of Electric Drives	,	_
The course deale v	developing and debugging control program for electric drive.	arawaro roccuroc	70 1100000 101
B1M14EPT1	Electric Drives and Traction	Z,ZK	5
The first part of t	he course focuses on the basics of designing AC drives with AC motors at different power supply types and loads, their reliability, des	•	explosive
atmospheres and	for special purposes as well as the necessary technical documentation. In the second part, students are introduced to mathematical	modeling, contro	ol strategies
(vector control d	in at taken a control ) and be also to be in to a final attenuation and a cotton of the final control and a cotton of the cotton		
(voolor control, a	irect torque control) and basic techniques of induction motor parameter estimation. Furthermore, the control and nonlinear behavior c	of a two-level volta	age-source
	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.		
B1M14ESP	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus	Z,ZK	5
B1M14ESP The course is focus	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus sed on contact and solid-state switching devices in LV networks. B1M14ESP The course is focus devices and their p	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus	Z,ZK as with modern seamentals of comm	5 emiconductor mutation. The
B1M14ESP The course is focus devices and their p transformer effici	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus sed on contact and solid-state switching devices in LV networks. Basic topologies AC switches and stress of their components, system rotection circuits, testing electrical devices. The course also deals with the general theory of electrical machines. Magnetic field. Fundamental transfer of the course also deals with the general theory of electrical machines.	Z,ZK as with modern se amentals of comr as. A rotating mag	5 emiconductor mutation. The gnetic field.
B1M14ESP The course is focus devices and their p transformer effici	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus  sed on contact and solid-state switching devices in LV networks. Basic topologies AC switches and stress of their components, system rotection circuits, testing electrical devices. The course also deals with the general theory of electrical machines. Magnetic field. Fundamency, voltage drop. Transients - switch to the network, a short circuit. Mathematical model of synchronous and asynchronous machines.	Z,ZK as with modern se amentals of comr as. A rotating mag	5 emiconductor mutation. The gnetic field.
B1M14ESP The course is focus devices and their p transformer effici	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus  sed on contact and solid-state switching devices in LV networks. Basic topologies AC switches and stress of their components, system rotection circuits, testing electrical devices. The course also deals with the general theory of electrical machines. Magnetic field. Fundancy, voltage drop. Transients - switch to the network, a short circuit. Mathematical model of synchronous and asynchronous machine starting and speed control. Influence of harmonic magnetic field. Single-phase induction motor. Work synchronous machine on a network.	Z,ZK as with modern se amentals of comr as. A rotating mag	5 emiconductor mutation. The gnetic field.
B1M14ESP The course is focus devices and their p transformer effici Induction machine,	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus  sed on contact and solid-state switching devices in LV networks. Basic topologies AC switches and stress of their components, system rotection circuits, testing electrical devices. The course also deals with the general theory of electrical machines. Magnetic field. Funda ency, voltage drop. Transients - switch to the network, a short circuit. Mathematical model of synchronous and asynchronous machine starting and speed control. Influence of harmonic magnetic field. Single-phase induction motor. Work synchronous machine on a network capacity.  Modeling of Dynamical Systems  ith combining knowledge of the dynamics of rigid bodies, fluid mechanics, aerodynamics, gas dynamics and thermodynamics in the control of the contr	Z,ZK as with modern seamentals of commers. A rotating magorork. Torque, stab	5 emiconductor mutation. The gnetic field. ility, overload
B1M14ESP The course is focus devices and their p transformer effici Induction machine, B1M14MDS1 The course deals w	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus  sed on contact and solid-state switching devices in LV networks. Basic topologies AC switches and stress of their components, system rotection circuits, testing electrical devices. The course also deals with the general theory of electrical machines. Magnetic field. Fundatency, voltage drop. Transients - switch to the network, a short circuit. Mathematical model of synchronous and asynchronous machine starting and speed control. Influence of harmonic magnetic field. Single-phase induction motor. Work synchronous machine on a network capacity.  Modeling of Dynamical Systems  Whose induction motors is analyzed.  Modeling of Dynamical Systems  of dynamics of the dynamics of rigid bodies, fluid mechanics, aerodynamics, gas dynamics and thermodynamics in the confidence of the dynamic systems. Seminars are focused on assembling of numeric models in Matlab / Simulink.	Z,ZK as with modern se amentals of comm as. A rotating mag york. Torque, stab Z,ZK ampilation of nonl	5 emiconductor mutation. The gnetic field. illity, overloac 5 inear models
B1M14ESP The course is focus devices and their p transformer effici Induction machine, B1M14MDS1 The course deals w B1M14REP	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus  sed on contact and solid-state switching devices in LV networks. Basic topologies AC switches and stress of their components, system rotection circuits, testing electrical devices. The course also deals with the general theory of electrical machines. Magnetic field. Fundamency, voltage drop. Transients - switch to the network, a short circuit. Mathematical model of synchronous and asynchronous machine starting and speed control. Influence of harmonic magnetic field. Single-phase induction motor. Work synchronous machine on a network capacity.  Modeling of Dynamical Systems  With combining knowledge of the dynamics of rigid bodies, fluid mechanics, aerodynamics, gas dynamics and thermodynamics in the confidence of dynamic systems. Seminars are focused on assembling of numeric models in Matlab / Simulink.  Control and Regulation of Electric Drives	Z,ZK as with modern se amentals of comm as. A rotating mag york. Torque, stab  Z,ZK ampilation of nonl  Z,ZK	5 emiconductor mutation. The gnetic field. illity, overload
B1M14ESP The course is focus devices and their p transformer effici Induction machine, B1M14MDS1 The course deals w	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus  sed on contact and solid-state switching devices in LV networks. Basic topologies AC switches and stress of their components, system rotection circuits, testing electrical devices. The course also deals with the general theory of electrical machines. Magnetic field. Fundamency, voltage drop. Transients - switch to the network, a short circuit. Mathematical model of synchronous and asynchronous machine starting and speed control. Influence of harmonic magnetic field. Single-phase induction motor. Work synchronous machine on a network capacity.  Modeling of Dynamical Systems  With combining knowledge of the dynamics of rigid bodies, fluid mechanics, aerodynamics, gas dynamics and thermodynamics in the confidence of dynamic systems. Seminars are focused on assembling of numeric models in Matlab / Simulink.  Control and Regulation of Electric Drives  Introduction to the problems of the theory of continuous control of electrical drives and power converters. During the semester are discontrol.	Z,ZK as with modern se amentals of comm as. A rotating mag york. Torque, stab  Z,ZK ampilation of nonl  Z,ZK	5 perniconductor mutation. The gnetic field. illity, overload 5 inear models
B1M14ESP The course is focus devices and their p transformer effici Induction machine, B1M14MDS1 The course deals w B1M14REP The course is an ir	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus  sed on contact and solid-state switching devices in LV networks. Basic topologies AC switches and stress of their components, system rotection circuits, testing electrical devices. The course also deals with the general theory of electrical machines. Magnetic field. Fundamency, voltage drop. Transients - switch to the network, a short circuit. Mathematical model of synchronous and asynchronous machine starting and speed control. Influence of harmonic magnetic field. Single-phase induction motor. Work synchronous machine on a network capacity.  Modeling of Dynamical Systems  with combining knowledge of the dynamics of rigid bodies, fluid mechanics, aerodynamics, gas dynamics and thermodynamics in the confidence of dynamic systems. Seminars are focused on assembling of numeric models in Matlab / Simulink.  Control and Regulation of Electric Drives  Introduction to the problems of the theory of continuous control of electrical drives and power converters. During the semester are discontrol, transmission system, determining the stability of the system, including controller types and methods of tuning.	Z,ZK as with modern se amentals of commes. A rotating mag york. Torque, stab Z,ZK ampilation of nonl Z,ZK cussed the basics	5 emiconductor mutation. The gnetic field. iility, overload  5 inear models  5 of feedback
B1M14ESP The course is focus devices and their p transformer effici Induction machine, B1M14MDS1 The course deals w B1M14REP The course is an ir	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus  sed on contact and solid-state switching devices in LV networks. Basic topologies AC switches and stress of their components, system rotection circuits, testing electrical devices. The course also deals with the general theory of electrical machines. Magnetic field. Fundation, voltage drop. Transients - switch to the network, a short circuit. Mathematical model of synchronous and asynchronous machines starting and speed control. Influence of harmonic magnetic field. Single-phase induction motor. Work synchronous machine on a network capacity.  Modeling of Dynamical Systems  With combining knowledge of the dynamics of rigid bodies, fluid mechanics, aerodynamics, gas dynamics and thermodynamics in the confidence of dynamic systems. Seminars are focused on assembling of numeric models in Matlab / Simulink.  Control and Regulation of Electric Drives  Introduction to the problems of the theory of continuous control of electrical drives and power converters. During the semester are discontrol, transmission system, determining the stability of the system, including controller types and methods of tuning.  Machinery and Structures of Power Plants	Z,ZK as with modern se amentals of comm as. A rotating mag york. Torque, stab  Z,ZK ampilation of nonl  Z,ZK cussed the basics  Z,ZK	5 emiconductor mutation. The gnetic field. iility, overload 5 inear models 5 of feedback
B1M14ESP The course is focus devices and their p transformer effici Induction machine, B1M14MDS1 The course deals w B1M14REP The course is an ir B1M14SSE The aim of the cour	inverter equipped with IGBT elements as the most commonly used power converter for induction motors is analyzed.  Electric Machinery and Apparatus  sed on contact and solid-state switching devices in LV networks. Basic topologies AC switches and stress of their components, system rotection circuits, testing electrical devices. The course also deals with the general theory of electrical machines. Magnetic field. Fundation, voltage drop. Transients - switch to the network, a short circuit. Mathematical model of synchronous and asynchronous machine starting and speed control. Influence of harmonic magnetic field. Single-phase induction motor. Work synchronous machine on a network capacity.  Modeling of Dynamical Systems  with combining knowledge of the dynamics of rigid bodies, fluid mechanics, aerodynamics, gas dynamics and thermodynamics in the conformation of dynamic systems. Seminars are focused on assembling of numeric models in Matlab / Simulink.  Control and Regulation of Electric Drives  Introduction to the problems of the theory of continuous control of electrical drives and power converters. During the semester are discontrol, transmission system, determining the stability of the system, including controller types and methods of tuning.  Machinery and Structures of Power Plants  se is to acquaint students with forms of energy transformation in power plants, describing the function of power facilities, their structure,	Z,ZK as with modern se amentals of comr as. A rotating mag york. Torque, stab  Z,ZK ampilation of nonl  Z,ZK cussed the basics  Z,ZK properties and ch	5 emiconductor mutation. The gnetic field. illity, overload  5 inear models  5 of feedback  5 aracteristics

BEZM	Safety in Electrical Engineering for a master's degree	Z	0			
The course provides for students of all programs periodic training guidelines for health and occupational safety and gives knowledge of electrical hazard of given branch of students.						
	Students receive indispensable qualification according to the current Directive of the Dean.
